

Dunmore Road Sustainability Appraisal

Sustainability Appraisal Statement for the Character Appraisal of Dunmore Road Conservation Area

Introduction

This statement sets out the findings of the Sustainability Appraisal into the character appraisal and boundary assessment for the above Conservation Area. A character appraisal is a document that looks in detail at the special character of a Conservation Area accurately describing the areas history, layout, land use, building form, architecture and urban space. It then goes on to recommend the positive and negative features and any suggested opportunities and recommendations within the Conservation Area. The boundary assessment is a separate document that looks specifically at changes to the boundary of the Conservation Area. It should be noted that the boundary assessment precedes the character appraisal and takes its recommendations into account.

The need to review and monitor the boundaries of the existing Conservation Areas through the preparation of Character Assessments is recognised in paragraph 4.28 of the Merton's Unitary Development Plan. And in paragraph 4.38 it sets out that these character assessments are to be published as Supplementary Planning Guidance SPG or, since the commencement of the Planning and Compulsory Purchase Act a Supplementary Planning Document.

Background

The Government has recently made changes to the planning system through the commencement of the Planning and Compulsory Purchase Act. The new Regulations require that any document that needs to be termed a Supplementary Planning Document SPD has to undergo a Sustainability Appraisal, including character appraisal of Conservation Areas so that it can be a material consideration in any decision relating to development in the Conservation Area.

Sustainability and sustainable development has become a key issue for government and is reflected in the UK Sustainable Development Strategy and its four key aims. These are social progress, effective protection of the environment, prudent use of natural resources and the maintenance of high and stable levels of economic growth. There is a growing wealth of guidance being produced for planning which increasingly incorporates these issues.

This appraisal has been produced in accordance with the Consultation paper 'Sustainability Appraisal of Regional Spatial Strategies and Local Development Frameworks'. The appraisals level of detail has been applied in accordance with the spatial scale, size and possible environmental effects of the designation.

Scope of the appraisal

To undertake scoping for a sustainability appraisal the document to be appraised needs to have strategic aims and objectives. In the case of a character assessment this is not possible as the main strategic objective of this type of document will be the same as the objective of the policy it is based on, ie to preserve and enhance the character of the conservation area. And this appraisal should not be looking at the policy as this will be the focus of an appraisal of the relevant Development Plan Document when this is undertaken. It should also be pointed out that the Character Assessment does not have any significant land use proposals for redevelopment nor does it include a major programme of enhancement therefore making it hard to come up with various options.

However, to be in compliance with the Regulations and the SEA Directive it is necessary to follow the process set out in ODPM guidance. Therefore it is necessary to consider options and environmental impacts. Environmental impacts are likely to be minimal as a Conservation Area is protectionist in nature. The only suitable alternative to carrying out the appraisal is the "do nothing" option of not doing the character appraisal at all. This option would not be acceptable because the council has a statutory requirement to undertake a character appraisal.

Any changes to the boundary of the conservation area will be appraised as well as any opportunities or actions that maybe recommended by the character assessment. The factual detail and description of the conservation area, which is the bulk of the document, is irrelevant to this process.

Description of the conservation area

The conservation area covers 1.6 hectares and is situated 1.6km south-west of Wimbledon town centre just off Worple Road. Raynes park station is closer though. It is a comparatively small conservation area made up of 41 properties which were all developed in roughly 1907. All the properties are semi detached but non of them are listed. The area was designated in 1990 because of the elaborate detailing on the houses and the consistency of character and also because of the way that character has not been subject to incremental alterations.

Boundary Changes

There are no boundary changes.

Actions

- No actions have been proposed for this conservation area.

The Sustainability Framework

The basis for the appraisal is the development of a Sustainability Framework. This is a draft set of objectives developed by the council that cover the sustainability issues for the borough. These objectives are developed through assessment of the objectives of various other documents from European Directives to the Mayors London Plan (Spatial Strategy) through to other council policy documents such as Merton's Environmental Action Plan. The baseline of environmental information is also taken into consideration when setting out the sustainability objectives. Many of the sustainability objectives are not relevant to the opportunities and proposed actions of the character appraisal but have been included anyway for completeness sake. Instead of tabulating the results a comments column has been included that hopes to consider the various types of positive and negative effects.

Topic	Objective	Comments
Land-Use	– Increase the use of urban brown field land	There are no proposals that affect land use.
Minerals and soils	– Where possible maintain and enhance soil quality	This is not relevant for this appraisal.
Waste	– Reduce the amount of waste generated, maximise reuse, recycling and recovery and reduce our reliance on landfill disposal	There is no proposal made that could improve waste disposal efficiency.
Carbon Reduction and Energy	– Ensure specific measures to improve carbon efficiency are used in new developments, refurbishment and/or renovations and extensions.	There is no proposal made that could improve energy efficiency.
Pollution	– Ensure the risks of pollution to human health and all areas of the boroughs environment are reduced	There is no proposal made that could reduce pollution.
Biodiversity and the Natural Environment	– Further protect existing designated sites through the use of S106 agreements	There are no proposals that improve biodiversity.
the Built Environment and its heritage	– Encourage sustainably built development	This is not relevant for this appraisal as no action is proposed.

Basic Needs	– Increase the number of appropriate affordable housing units in Merton to reflect increases in demand	This is not relevant for this appraisal.
Work and the economy	– Maintain local employment levels	This is not relevant for this appraisal.
Health	– Improve health equality	This is not relevant for this appraisal.
Transport and access	– The need for travel is minimised	This is not relevant for this appraisal as no action is proposed.
Crime	– Reduce the level of street crime	This is not relevant for this appraisal.
Education	– Increase educational attainment of the boroughs residents	This is not relevant for this appraisal.
Equity and Participation	– Poverty is reduced	This is not relevant for this appraisal.
Cultural, leisure and social activities	– Improve the access to and quality of open spaces	This is not relevant for this appraisal.

Conclusions

There are no conclusions arising from this appraisal as no actions are proposed.
