1. Introduction

As a public body, the London Borough of Merton must lead by example. The HSE continue to hold local authorities to account on this basis and expect councils to put in place robust arrangements for managing the health, safety and welfare of staff and others who come into contact with the authority as part of the Council’s business.

To help the Council fulfil this requirement the Head of Safety Services leads a team of professionals to provide a statutory Health and Safety service to all employees of the London Borough of Merton as required by duties imposed on employers under the Health and Safety At Work Etc Act 1974 and the Management of Health and Safety At Work Regulations 1999.

In line with good practice and industry standards, Merton’s strategy reflects the work of the Health and Safety Executive whose principals are to ensure that those who create risks take responsibility for managing those risks.

In following these principals we will ensure that moving forward our systems reflect the HSE in that actions should be proportionate to the risks that need to be managed, and that they are tailored to the areas of the business where risks are generated, the work undertaken and the people who work there.

In achieving this, Safety Services will work with departmental management teams in identifying and developing suitable systems and procedures in compliance with their duties under the legislation. Our methodology uses the principals of HSE guidance HSG 65, Managing for health and safety. The key principals are Plan, Do, Act, Check. These principals underpin the council’s safety management system and operational arrangements as detailed in the Corporate Health, Safety and Welfare Policy.

2. Policy and organisation arrangements

The London Borough of Merton is committed to providing its employees with safe conditions of work as far as is reasonable practicable and has structured arrangements in place to ensure the safety and wellbeing of staff and others who may be affected by our activities. Our aim is to minimise the adverse impacts to individuals and the business from ill health and injury.
2.1 Making it Happen

The fundamentals of safety management remain at the core of what we do:

- Strong and visible leadership
- Collaboration and partnerships, including worker engagement

This is achieved by ensuring that:

- Professional health and safety arrangements are adequately resourced to meet the needs of the organisation
- CMT routinely accepts and acts on health and safety advice
- Risk assessments are carried out for all relevant areas under their control

Actions arising out of Health and safety inspections and audits are acted on in a timely manner:

- Line managers are fulfilling their roles in implementing health and safety
- Employees or their representatives are involved in decisions that affect their health and safety.

Departmental Management Teams (DMT) considers the health and safety as an agenda item:

- Horizon scanning to ensure that effective risk management is designed in to our current and future business models
- Both CMT & DMT decisions are made in the context of the organisation’s health and safety policy and recognise the importance of ‘designing-in’ health and safety when implementing change.
Visible leadership – DMT members can reinforce health and safety policy by being seen on the ‘shop floor’, following all safety measures themselves and addressing any breaches effectively and efficiently.

Having robust procurement standards in place for purchasing goods, equipment and services that recognises health and safety in operation.

Ensuring that key issues are addressed at risk management committee level, whilst ensuring that effort is not being wasted on trivial risks and unnecessary bureaucracy.

Assessing the health and safety arrangements of partners, key suppliers and contractors, as their performance could adversely affect the organisation.

Supporting worker involvement in health and safety, above our legal duty to consult worker representatives, can improve participation and help prove commitment from all.

Considering health and safety when deciding senior management appointments.

Promoting healthy workplace initiatives to encourage and create health working environments, help reduce sickness absence and improve employee wellbeing.
2.2 Corporate Health, Safety & Welfare Policy

Corporate Safety Services produces and reviews the Corporate Health, Safety and Welfare Policy annually. The process of revision considers any changes to legislation, organisation and or good practice and is formally consulted on via the trade unions and management.

The policy is published on the intranet and the Merton website and there is an expectation that all managers will consider and communicate the contents of the policy to staff directly and through the production of their own procedures and arrangements for the safety of staff.

All Policies, advice and guidance are now available on the Merton intranet and the Merton website making it accessible to all who need it.

Health and Safety information (Intranet)
Health and Safety Information (web pages)

Planned policy work for 17-18 includes:

- To embed the arrangements set out in the Water Safety and Prevention of Legionellosis Policy introduced in March 2017 across the council.

Key work streams

Acting together will be a key to our success into the future, as Merton works towards 2020 and the aspiration to be London’s best Council, we will need to work together with managers and partners to achieve common goals and building on the success of previous years. In simplifying our processes and collaborating on work streams we will ensure that Merton does not overburden managers with complex safety management processes and procedures. We will work with them to ensure they are proportionate and appropriate.

The results of this will be a wider ownership of issues that foster a culture of good safety management and proportionate risk assessment.

Working with managers through DMT our discussions will include the implications of introducing;

- New or revised processes
- New working practices and procedures
- New personnel
• Closer working with other Local Authorities, partners and other organisations

3. Legislation Update and significant changes for 2017/18

There are no current consultations or proposals for consideration from the HSE.

4. Planning and implementation

The health and safety work plan is based on a framework for health and safety management across the organisation. The strategy is based on a combination of audit and inspection alongside risk management and implementation of best practice / industry standard management controls. This is in line with the Health and Safety Executives strategy of “Plan, Do Act, and Check”.

These work streams are managed as part of our routine day to day health and safety management activities.

A breakdown of key areas of work includes:

• Audit and inspection of Merton owned, managed or maintained premises
• Audit and inspection of management arrangements and controls
• Provision of professional advice and guidance to managers and staff
• Development and implementation of corporate policies, procedures and guidance to aid managers in compliance of health and safety
• Management and oversight of accident and incident reporting and investigation.
• Asbestos management in schools and corporate buildings including management reviews and actions with information published and available on the council Web page and intranet.
• Management and oversight of water safety and the prevention of Legionellosis
• Development and expansion of online and self-service H&S learning and development packages.
• Work with Facilities management to embed the work on statutory compliance and availability of information through publication of statutory information.
• Work with statutory duty holders to produce fire risk assessments and make information available in a variety of relevant formats on the internet and intranet.

4.1 Accident reporting system

Safety Services continues to work with the Business Improvement team to maintain the council online accident and incident reporting system. All new reports are completed via an E-form which is available on the Merton Internet
page and this means it is now accessible to all council employees including schools and other locations outside of the Civic centre.

Further stages of development will be to improve the provision of information to protect staff from potentially violent persons by linking information from the accident system to through Customer Relations Management software (CRM) to ensure staff accessing information can see relevant information on safety advice and risk management issues.

4.2 Advice and Support

In compliance with the Health and Safety At Work Etc Act 1974, and corresponding legislation, the Council employs Safety professionals to act as competent lead on all matters of health safety and welfare across the council. Safety Services act under the authority of the Chief Executive and the Director of Corporate Services as detailed within the Corporate Health, Safety and Welfare Policy.

5. Raising Awareness and Promoting a Positive Health & Safety Culture

The Safety section continues to promote safety awareness, highlight relevant health & safety issues and advice on any amended policies, which has health & safety implications throughout the authority. The section responds to managers and staff safety concerns and provides specialist advice to the organisation by working with them to resolve issues and improve safety management.

Raising health and safety awareness within the organisation will enable managers to consider the risks and produce effective controls to improve safety management and drive forward a positive safety culture and reduced instances of injury and ill health. The safety services team maintains professional standards through individual and corporate membership of professional organisations such as the Institute of Occupational Health (IOSH) the British Safety Council and The International Institute of Risk and Safety Management (IIRSM). Initiatives and information gained through this route is discussed and built into work plans and passed on to managers and staff directly.

Healthy Workplace

Safety Services continues to support the work of the Director of Public Health and health colleagues to maintain the health workplace scheme for Merton. This is based on the London Healthy Workplace Charter that has been introduced by the Mayor of London and Merton has signed up to this charter with a view to improving the health of our employees using evidence based initiatives and schemes across a number of domains. The Merton workplace action plan links to these themes and is seen as a key part of being London’s best council. A major driver to success in any
organisation is the wellbeing of staff and mental wellbeing plays a significant part in in the resilience of staff to cope when times get tough. Work across the council will progress with the five steps to mental wellbeing in line with the NHS guidelines which are; Connect, Be active, Keep learning, Give to others and Be mindful.

6. Proportionate risk assessment

The formal process for the review of health and safety performance exists across the organisation and is a crucial element of a robust safety management system. It allows the management teams to establish whether the essential health and safety principles are working within the departments.

The Safety Services team undertakes health and safety audits of all Merton owned, managed or maintained properties. The audits follow a recognised process to get under the skin of the property or service and provide an in depth look at the management of that part of the organisation. In each case a report is generated and along with general information and advice the responsible manager will receive a list of actions that are prioritised with recommendation as to how to deal with that action.

Actions are split into three categories;

<table>
<thead>
<tr>
<th>Priority</th>
<th>Description</th>
<th>Requirements</th>
</tr>
</thead>
</table>
| Priority A | **To be completed within 4 weeks.** | - Where a failure to meet or achieve the required standard or level of compliance results in a breach of statutory duty giving rise to an immediate threat to people, property or process  
- Where there exists an unacceptable level of risk if remedial action is not taken |
| Priority B | **To be completed within 8 weeks** | - Where a failure to meet or achieve the required standard or level of compliance will result in a breach of statutory duty giving rise to an imminent threat to people, property or process if action is not taken within the eight week completion period  
- Where the level of risk will become unacceptable if remedial action is not taken within the eight week completion period |
<table>
<thead>
<tr>
<th>Priority C</th>
<th><strong>To be completed within 12 weeks</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Where there has been a failure to complete any item previously assigned as Priority C.</td>
</tr>
<tr>
<td></td>
<td>• Where a failure to meet or achieve the required standard or level of compliance will result in a breach of statutory duty if action is not taken within the twelve week completion period</td>
</tr>
<tr>
<td></td>
<td>• Where the level of risk will become unacceptable if remedial action is not taken within the twelve week completion period</td>
</tr>
<tr>
<td></td>
<td>• Any defect identified at the time of the inspection that does not fall into the Priority A or B category.</td>
</tr>
</tbody>
</table>

In order to promote health and safety and to ensure that the most serious actions are dealt with in required timescales, Priority “A” actions are monitored and reported to Corporate Management Team on a monthly basis as a key performance indicator.

A recent refresh of the KPI see actions split into two categories, safety Management and Building Management. Safety Management relates to the policy, procedures and arrangements for the staff and others working or visiting the building and Building Management relates to statutory compliance arrangements in respect of the maintenance and upkeep of the building.

*It should be noted that there has been a significant improvement in the evidence provided in relation to building management, we are now working with FM and building managers to address the actions arising from these formal compliance checks and inspections.*

**6.1 Issues of note arising from the 2016-17 audits:**

There has been a big improvement in the evidence available relating to statutory inspections and the compliance with both safety management and building management.

We now need to focus attention on addressing the actions that are raised in from those inspections and it is our aim to work with the managers of premises and the support services of the council to ensure these actions are dealt with in a timely and effective manner.

As part of this we will be highlighting these actions in our audit reports to ensure those with responsibilities for managing premises are clear as to the actions to be taken to meet statutory obligations.
6.2 Premises inspected 2016/17

Safety Services aims to inspect 60 premises per annum based on a rolling 18-24 month cycle. This is an ambitious target with limited resources; however Safety services will continue to work towards achieving this goal. This year the total number of properties inspected was 35, as stated in the last years annual report this was mainly due to unfilled posts in the team.

With regards to staffing, Safety Services has now successfully recruited two new members of staff, our new administrator has made a positive impact on service delivery and a number of new processes introduced has made the service more efficient. We have also recruited a new trainee Safety Adviser who has successfully completed his first stage of training to be a fully qualified Safety Practitioner.

Inspections are planned several months in advance and premises managers are sent questionnaires prior to each visit for them to provide detail on compliance and an opportunity for the inspecting officer to consider documentary evidence of safety management prior to the physical inspection. Post visit the premises manager will receive a comprehensive report and action plan detailing any work to be done along with the timescales to achieve it. All actions are agreed with the manager on the day.

7. Health and Safety Committees

Merton's Corporate Health & Safety Committee meets on a quarterly basis and is well attended.

The Corporate Safety committee is a consultative forum of trade union representatives and representatives from all directorates, which discusses safety related issues pertaining to Merton’s undertakings. Various issues are discussed, such as: Accident Analysis, violence to staff, progress on safety audits, policies, staff training, forthcoming legislation and welfare concerns etc.

The committee is also there to receive reports from representatives from sub committees on matters which have not been resolved and require higher level intervention.

The Trade Unions are currently reviewing the terms of reference of the committee to reflect changes in the organisation and the make-up of the group. This review will ensure the group can continue to meet and work to an effective collaborative framework into the future.

Children Schools & Families and Community and Housing have 2 arenas, in which the safety section attends,

- A joint directorate ‘Health & safety forum’
- Individual directorate departmental consultative committee (DCCs).

Specific departmental health & safety issues are discussed at these meetings. The safety section produces interim accident figures for all departments at these areas.

The safety section attends the education forum, teacher’s consultative negotiation forum (TCNF) in which specific health & safety issues are discussed relevant to schools.
There is a DCC for Corporate Services including the Chief Exec and discussions have taken place with the new Assistant Director of public space, contracting and commissioning regarding a revised DCC for the restructured Environment & Regeneration department.

8. Performance statistics

The following statistics provide a high level view of accident reporting across the council and departments. Safety Services publish quarterly reports on a detailed level on the intranet and council website, see links below or contact Safety Services on 0208 545 3384 for information;

Health and Safety information (Intranet)
Health and Safety Information (web pages)
In summary there has been a decrease in reported accidents in most areas over the last twelve month period. This is potentially due to a normalising process after the introduction of the system in September 2015. Safety Services will continue monitoring the accident reporting to consider any specific trends that may indicate changes in risk management which might need to be addressed.

Schools are showing an increase in near miss and non injury reports which on investigation is attributable to improved ability to log on and the simplification of the report form.

Where trends are identified (up or down) this information will be reported to the relevant managers, Directors and consultative committees along with the recommended remedial actions.

END
