Deprivation is based on a small area, geographically known as Lower Super Output Areas (LSOAs). In England, LSOAs have between 1000 and 3000 people living in them with an average population of 1500 people. In most cases, these are smaller than wards, thus allowing the identification of small pockets of deprivation. There are 32,462 LSOAs in England, of which 124 LSOAs in Merton. The lower the percentage indicates high deprivation and a high percentage indicates low deprivation. An area itself is not deprived; it is the circumstances and lifestyles of the people living there that affect its deprivation score.
