GENERIC RISK ASSESSMENT FORM

LADDERS

RISK ASSESSMENT UNDERTAKEN BY...................................
DATED...................................

The purpose of this generic risk assessment is to provide site managers and supervisors with a check list which ensures all action has been taken to identify all the hazards associated with a particular working system and that appropriate control measures have or will be taken to reduce risk to an absolute minimum.

HAZARDS
The main hazards associated with Ladders are:
- Failure to secure and foot the ladder correctly.
- Unsafe use of the ladder (over-reaching, sliding down, etc.).
- Using a ladder where a safer method is required.
- Using a ladder with a defect (Painted timber ladders which hides defects, this is strictly prohibited)
- Using unsuitable base to ladder.
- Insufficient handhold at top of ladder or at stepping off position.
- Insufficient foothold at each rung.
- Electric shock from use of ladders near overhead electrical cables.
- Tools etc. not properly secured when ascending or working on the ladder.
- Insufficient use of overlap of extension ladders
- Use of ladders in poor light
- use of ladders in high winds

PLANNING PROCEDURE
During the planning of any work, the Contract Manager will ensure that the requirements of the relevant standards are allowed for. The contract manager will:
Determine whether the job can be done more safely in a different way
Arrange for the required number and type of ladders to be provided taking into account the relevant standards and the work to be carried out.
Ensure that the mean of securing and footing ladders are planned as far as reasonably practicable and sufficient resources are made available.

MONITORING AND SUPERVISION
The site manager will:
- At start of work check ladders before use to ensure that they are:
  - in date for test
  - free of defects
  - conduct weekly checks whilst they are on site and enter details and findings of checks in site log
- Where defect is noted or ladder is reported as damaged take action to remove from services and ensure it is clearly identified as non-usable where it remains on site.
- Ensure all ladders are checked when in use that they are:
  - properly secured at the top
  - properly footed
  - do not exceed 75° angle when erected
- Ensure that ladders are not used where a more suitable method of work has been agreed (e.g. employees avoiding setting up portable scaffolding)
- Ensure that safe handholds are available and sufficiently close to the work
- Ensure that the ladder not over extended for the job
- Ensure all tools, etc. are properly secured and carried when working from the ladder.
- Ensure that the ladder is the right type for the task to be undertaken
- Is the top rung level with the platform and is there adequate hand hold at the place of landing
- etc etc...
The purpose of this generic risk assessment is to provide site managers and supervisors with a check list which ensures all action has been taken to identify all the hazards associated with a particular working system and that appropriate control measures have or will be taken to reduce risk to an acceptable minimum.

PLANNING STAGE
Determine, list and record, how and where ladders are to be used on the site and for what types of work.
Determine whether a safer system of work can be provided
Provide means whereby ladders can be secured at the top (where this is impracticable provide means for securing at the base).
Institute a system of periodical inspections and maintain records of purchase, repair and inspection

</table>

INSTRUCTIONS TO EMPLOYEES
- Use only equipment issued for the purpose
- Check before use that it is in good condition
- Ensure the ladder is firmly secured at the top (if this impracticable ensure that it is secured at the base).
- Set the ladder at the correct angle (1 out to every 4 up)
- Stand the ladder on a firm and level base & ensure that the base is 'footed' by another person.
- Make sure your footwear is in good condition
- Clean any wet, icy or greasy rungs before use.
- Clean off any mud or grease from boots before climbing
- Carry light tools in a holster or a tool bag slung from a strap over the shoulder, or use a hoist line.
- If in doubt about safety on ladders contact your supervisor immediately.

BE SAFE AND SECURE WHEN WORKING ON LADDERS
