Part 01
Introduction

a great place to live and call home, where citizens are also neighbours and take responsibility for improving their own lives and neighbourhoods

Merton’s Sustainable Community Strategy (2009-2019)
Draft Estates Local Plan - second consultation

What is this consultation about?

1.1 This is an opportunity for you to send your views directly to the council about the future of the estate where you live.

Please visit Merton’s website to find our more and have your say: www.merton.gov.uk/estatesplan

1.2 Merton Council wants to hear your views on the Draft Estates Local Plan for the estates of Eastfields, High Path and Ravensbury.

Using background research, responses from the council’s public consultation in September - November 2014 and other key considerations (e.g. national and regional planning policies) the council has drafted the Draft Estates Local Plan to guide any regeneration proposals that may come forward for the three estates.

How is the council’s consultation different from Circle Housing Merton Priory’s consultation?

1.3 The council’s consultation is completely separate and independent from the consultations which has been conducted by Circle Housing Merton Priory. We know you may have heard from Circle Housing Merton Priory already, and there have been a number of Circle Housing Merton Priory workshops on how the estates could look in the future including details on how the buildings and landscaping could look.

1.4 The council’s consultation gives you the opportunity to tell us directly your ideas about regeneration and the the planning policies that will need to be adhered to by any development proposal that may come forward in the future. The council’s consultation sets out planning policies to guide any regeneration proposals that may come forward rather than detailed matters concerning internal layouts, size and type of new homes. It is also another opportunity for people who will be affected by the proposed regeneration, if it goes ahead to make their views known to the council independently of Circle Housing Merton Priory.

1.5 Even if you have participated in Circle Housing Merton Priory’s consultation, we would strongly recommend you take this opportunity to complete the council’s consultation too. Your response will be considered and will provide invaluable input into the council’s Draft Estates Local Plan as well as guidance on the next steps.

What has happened so far?

1.6 The council asked for your views between September – November 2014 to find out what options you thought the Draft Estates Local Plan should cover. The feedback from this consultation is available on Merton Council’s website here: www.merton.gov.uk/estatesplan

1.7 People told us they were unsure about regeneration or felt that they needed more information, such as the Residents offer, before they could make a decision. The council has taken account of the feedback provided and has produced the Draft Estates Local Plan that provides more detail, including a visual idea of what the area could look like.

What does the council’s Draft Estates Local Plan cover?

1.8 The council’s Draft Estates Local Plan consists of the following sections:

- Part 2 provides a background setting out the key drivers, the case for regeneration, the design principles and the council’s vision for each of the new neighbourhoods.

- Part 3 looks at each estate neighbourhood in turn. It proposes a set of detailed policies to guide development. This is informed by a study of the historic context and site analysis of the current estates.

- Part 4 sets out requirements for design codes to guide development and ensure design consistency on each estate and every phase of development.

- Part 5 sets out how the Plan will be expected to be delivered and implemented.
Tell us what you think

1.9 The Draft Estates Local Plan, is a legal document which will guide any redevelopment proposals for the three estates. Alongside the Draft Estates Local Plan you can also find supporting information (e.g. Merton's Sustainability Report and background research). Please visit Merton's website to find out more:

www.merton.gov.uk/estatesplan

We would like to hear your views about your estate.

How to respond

1.10 Please tell us what you think about the draft Estates Local Plan and the supporting information by sending your feedback by 18 March 2016 to us:

by on-line questionnaire located here:
www.merton.gov.uk/estatesplan

or by e-mail to:
estatesplan@merton.gov.uk

or in writing to:

Future Merton,
London Borough of Merton,
12th Floor Civic Centre,
London Road, Morden,
SM4 5DX

1.11 In circumstances where groups or organisations share a similar view as to the future development or use of a site, it would be helpful if one submission could be made on behalf of that group / organisation. It would also be useful if the group / organisation state how many people the submission is representing and how the representation was authorised.

1.12 In line with the normal planning process and to ensure your comments can be considered by councillors, we cannot accept anonymous or confidential submissions.

1.13 If you have any queries regarding the council’s consultation or the consultation form, please contact the Future Merton Team at the address below or telephone 0208 545 3693

Next steps

1.14 Your feedback will be considered by your democratically elected councillors, who will decide whether or not to move to the next stage of the Local Plan. Everybody’s feedback will be published on the council’s website, with all confidential details removed.

1.15 If the Local Plan moves to the next stage, there will be another opportunity to have your say in Summer 2016.
Merton Abbey Mills
**Background**

2.1 The Draft Estates Local Plan area is made up of three existing housing estates within Merton: Eastfields, High Path and Ravensbury. The council transferred its housing stock to Merton Priory Homes (now Circle Housing Merton Priory - CHMP), including the three estates in March 2010. The Transfer Agreement included a legal obligation for CHMP to undertake a programme of property improvements known as Decent by December 2015.

2.2 The Decent Homes works are underway across the transferred housing stock. However in preparing the plans to undertake these works on the three estates, CHMP have come to doubt the case for investing in what CHMP regard, in some instances as homes and neighbourhoods of a poor standard. As a result CHMP have been exploring regeneration based alternatives for the three estates via preparation of masterplans in consultation with their residents since summer 2013.

2.3 Should regeneration go ahead, this Draft Estates Local Plan will be an essential part in shaping the redevelopment process of Eastfields, High Path and Ravensbury Estates, to create new well designed high quality neighbourhoods aimed at fundamentally improving the quality of life for existing and future generations living in the area.

2.4 The Plan’s purpose is to guide any redevelopment proposals, for the three estates that may come forward over the next 10 to 15 years. This Plan is wholly design led and pitched at a high level, with detailed scheme proposals being determined by the council at the planning application stage, should regeneration go ahead.

---

The diagram above illustrates the preparation stages undertaken by the council for the Estates Local Plan alongside those stages undertaken by Circle Housing Merton Priory in developing their masterplans for the three estates.

Key drivers

2.5 In preparing the Draft Estates Local Plan we have had regard to a number of relevant considerations including responses received from the Council’s initial consultation during September 2014 and November 2014 and the following key drivers.

The Community Plan

2.6 Merton has a Sustainable Community Strategy, which is also known as Merton’s Community Plan (2009-2019). This is the overarching strategic plan of the Merton Partnership. It was published in 2009 and refreshed in 2013. This sets out the Partnership’s long term vision and priorities for the borough up until 2019, which is:

“a great place to live and call home, where citizens are also neighbours and take responsibility for improving their own lives and neighbourhoods.”

2.7 The Community Plan has four strategic themes, each of which has a vision. These themes are:

• Sustainable Communities and Transport
• Safer and Stronger Communities
• Healthier Communities
• Children and Young People

2.8 In addition, the Community Plan recognises a number of cross-cutting themes including working to bridge the gap between the east and west of Merton and helping to promote Merton’s economy.
Merton’s Core Planning Strategy

strategic objectives

2.9 The Draft Estates Local Plan embodies and accords with Merton’s strategic objectives as set out in Merton’s Core Planning Strategy 2011 which are as follows:

- To make Merton a municipal leader in improving the environment, taking the lead in tackling climate change, reducing pollution, developing a low carbon economy, consuming fewer resources and using them more effectively.
- To promote social cohesion and tackle deprivation by reducing inequalities.
- To provide new homes and infrastructure within Merton’s town centres and residential areas, through physical regeneration and effective use of space.
- To make Merton more prosperous with strong and diverse long-term economic growth.
- To make Merton a healthier and better place for people to live, work in or visit.
- To make Merton an exemplary borough in mitigating and adapting to climate change and to make it a more attractive and green place.
- To make Merton a well connected place where walking, cycling and public transport are the modes of choice when planning all journeys.
- To promote a high quality urban and suburban environment in Merton where development is well designed and contributes to the function and character of the borough.

A review of the Draft Estates Local Plan policies against Merton’s Core Planning Strategy Objectives is located at Appendix 1.

Sustainability Appraisal

2.10 A Sustainability Appraisal (SA) which incorporates a Strategic Environmental Assessment (SEA) has been undertaken in the preparation of the Draft Estates Local Plan and has assisted in the shaping of the document. The purpose of SA/SEA is to promote sustainable development by integrating social, economic and environmental considerations into the preparation of the new Local Plan.

2.11 The SA/SEA is also an important tool for developing sound planning policies which are consistent with the government’s sustainable development agenda and achieving the aspirations of local communities. The findings of the appraisal ensure that the policies will facilitate sustainable development throughout Merton.

Health Impact Assessment

2.12 The purpose of the Health Impact Assessment (HIA) is to promote sustainable development by integrating health (including mental health) and wellbeing considerations into the preparation of plans or strategies; by identifying the key health and wellbeing issues and the groups that are likely to be affected by the implementation of the Plan. The HIA, like the SA/SEA is an important tool in developing sound planning policies and assesses each stage of the Estates plan making process.
2.13 An Equalities Impact Assessment of the Draft Estates Local Plan has been undertaken as required by the Equality Act 2010. This examines the impact of policies on certain groups, to identify and combat discrimination and serve the needs of disadvantaged groups in the community.

2.14 In accordance with the Equality Act 2010 Merton Council has carried out an Equality Impact Assessment (EqIA) report to identify the likely impact of the Plan on Merton’s diverse communities and to recommend any changes to mitigate against any identified impacts or to recommend other changes to the Plan, where appropriate.

Habitat Regulation Assessments

2.15 In accordance with the Habitats Directive (92/43/EEC) Habitats Regulations Assessment (HRA) screening exercises have been undertaken for the Plan. The HRA assesses the potential effects of land use plans to ensure that the protection and integrity of European Sites namely Wimbledon Common and Richmond Park is considered by the planning process at a local level.

2.16 In the wider planning policy context, there are a number of documents that make up what is known as the ‘Development Plan’ for the borough. These are as follows:

- The Mayor’s London Plan 2015
- Merton’s Core Planning Strategy 2011
- The South London Waste Plan 2012
- Sites and Policies Plan 2014
- Policies Map 2014

2.17 The above five documents - Merton’s Local Plan and the Mayor’s London Plan – make up the Statutory Development Plan for the borough. These contain the planning policies that guide development in Merton. The Draft Estates Local Plan, once adopted, will sit alongside these documents and form part of Merton’s Local Plan.

2.18 The National Planning Policy Framework 2012 (NPPF) sets out the Government’s policy on planning matters in England and Wales. All local plans should be in conformity with this national policy.
2.19 The Mayor’s London Plan March 2015 contains planning policies that guide all London boroughs on issues for the benefit of the whole of London, such as the number of new homes to be built, the size of town centres, and transport issues. All other planning documents have to be in general conformity with the Mayor’s London Plan.

2.20 The Sites and Policies Plan and Policies Map contains

- the detailed planning policies which guide planning applications for development in Merton, implementing the more strategic principles set out in Merton’s Core Planning Strategy 2011 and the London Plan 2015
- sites for allocation for new uses
- maps which illustrate where certain planning policies apply in Merton, for example town centre boundaries, nature reserves, neighbourhood shopping parades. This is known as the Policies Map.
Key drivers

Presumption in favour of sustainable development

2.21 When considering development proposals the council will take a positive approach that reflects the presumption in favour of sustainable development contained in the National Planning Policy Framework. It will always work proactively with applicants jointly to find solutions which mean that proposals can be approved wherever possible, and to secure development that improves the economic, social and environmental conditions in the area.

2.22 Planning applications that accord with the policies in this Local Plan (and, where relevant, with polices in neighbourhood plans) will be approved without delay, unless material considerations indicate otherwise. Where there are no policies relevant to the application or relevant policies are out of date at the time of making the decision then the council will grant permission unless material considerations indicate otherwise – taking into account whether:

- Any adverse impacts of granting permission would significantly and demonstrably outweigh the benefits, when assessed against the policies in the National Planning Policy Framework taken as a whole; or

- Specific policies in that Framework indicate that development should be restricted.

2.23 Government legislation requires development plan documents to be appraised for sustainability to ensure that planning policies are developed to achieve the optimal balance of positive social, environmental and economic outcomes for residents. This is known as a Sustainability appraisal.

2.24 In accordance with an EU Directive, councils are required to undertake Strategic Environmental Assessments of new plans. Government guidance allows both assessments to be combined. An assessment of Merton’s Sites and Policies DPD has been conducted, which integrates both a Sustainability Appraisal and a Strategic Environmental Assessment and is referred to by the single term ‘Sustainability Appraisal’. A summary of the appraisal results of each of the draft detailed policies is provided in this report. Merton’s Sustainability Appraisal Report 2013 contains the full assessment of the draft detailed policies and the potential sites.
Case for regeneration

2.25 As part of the commitment to improving the quality of accommodation to Decent Homes Standards, since 2010 CHMP have undertaken technical surveys and financial planning work towards achieving this commitment. This work in CHMP’s view indicated that significant refurbishment, maintenance work and financial investment would be required to the housing stock to achieve the required standard.

2.26 CHMP advise that residents of Eastfields, High Path and Ravensbury have told them about the problems with their homes and outside spaces, which include homes that are expensive to heat, suffer from leaking roofs, poor noise insulation, condensation and damp and issues with refuse collection and unsafe pathways. Some of these issues were also raised by residents during the council’s consultation in the autumn of 2014, particularly concerns around unsafe pathways, damp and poor internal conditions. Having undertaken an exploration of reasonable options CHMP have decided that regeneration is the most cost effective way of delivering longer term sustainable Decent Homes through the provision of new, well-designed, energy-efficient homes that will meet the needs of residents now and in the future.

2.27 For Eastfields and High Path CHMP propose regeneration of the whole estates and for Ravensbury a mixture of partial regeneration refurbishment and retention. The council has asked CHMP for evidence to support CHMP’s view that regeneration is the best way forward including:

- Case for regeneration
- Housing needs studies
- Socio-economic analysis
- Stock condition surveys
- Urban design studies

2.28 It is the council’s view, supported by CHMPs evidence that whilst incremental refurbishment and Decent Homes works would improve the internal housing quality in the short to medium term, regeneration provides an opportunity to deliver comparatively more significant positive changes to the three neighbourhoods and a once in a generation opportunity to improve the quality of life for current and future residents.

2.29 Regeneration will be expected to provide a range of choices and benefits including high quality well designed neighbourhoods, wider housing mix, more private space for residents, better quality green spaces and community facilities and job creation opportunities. It will also be an opportunity to provide much needed new homes by making more efficient use of brownfield land, improving the quantity, quality and mix of new homes on each of the three estates.

2.30 A key expectation of any regeneration proposals that comes forward will be a commitment to keeping the existing community together in each neighbourhood, and for existing residents to have a guaranteed right to return to a new home in their regenerated neighbourhood.

The Draft Estates Local Plan Area

2.31 The Draft Estates Local Plan area covers three existing neighbourhoods of Eastfields, High Path and Ravensbury estates as indicated in the respective maps overleaf. Upon adoption of the Draft Estates Local Plan, Merton’s statutory Policies Map will be updated to include the Draft Estates Local Plan regeneration area as set out in the adjacent map.
The vision

2.32 This section sets out the vision for the regeneration of the estates. This provides the framework for the Local Plan. This vision is informed by a number of other documents and requirements that are detailed in the following sections.

Overarching vision

2.33 The overarching vision underpins the whole Local plan and is applied to all of the estates. It is:

“The creation of sustainable, well designed safe neighbourhoods with good quality new homes, that maintain and enhance a healthy local community, improve living standards and create good environments.”

The visions for each estate

2.34 The positive characteristics within and surrounding the estates have informed the individual vision for each estate. These are as follows:

Eastfields: Contemporary Compact Neighbourhood

A new neighbourhood which recognises the existing estate’s experimental design and maintains a distinctive character through the creation of a contemporary architectural style encompassing a variety of types, sizes and heights for new homes overlooking traditional streets and the improvement of links to the surrounding area.

High Path: New London Vernacular

The creation of a new neighbourhood with traditional streets and improved links to its surroundings, that supports the existing local economy. Buildings will be of a consistent design, form and character, using land efficiently to make the most of good transport services and create a distinctly urban character based on the “New London Vernacular” of traditional terraced streets, front doors to streets, use of brick and good internal design and access to quality amenity space.

Ravensbury: Suburban Parkland Setting

The creation of a new neighbourhood that is part of the wider parkland and which protects and enhances landscape quality and biodiversity. Characterised by buildings arranged as traditional streets and spaces that improve links to the surrounding area, allow for the landscape to penetrate the site whilst simultaneously improving flood mitigation and increasing the number of homes whilst retaining the character of its suburban parkland setting.
Draft Estates Local Plan Vision

The creation of sustainable well designed safe neighbourhoods with good quality new homes, that maintain and enhance a healthy local community, improve living standards and create good environments.

Eastfields Vision
Contemporary Compact Neighbourhood

High Path Vision
New London Vernacular

Ravensbury Vision
Suburban Parkland Setting
Design principles

2.35 This section outlines a set of broad design principles. All development proposals will be expected to adhere to these principles in order to achieve the highest standards of design, accessibility and inclusive design. Proposals must be accompanied by Design and Access Statements (DAS). Full definitions of the terms used for the principles can be found in the Glossary.

Perimeter blocks: Buildings arranged so that the fronts face outwards towards the street.

2.36 New development will be expected to be built using the principle of perimeter blocks. This is where the public entrances to buildings face the streets and the more private elements are less visible and accessible to the rear. Perimeter blocks are a flexible approach to development and need not create a uniform layout. This approach creates a strong and easy to understand layout. Importantly, it also creates a clear arrangement of public and private space that builds in natural surveillance and security.

Active frontages: Buildings with many entrances and windows onto the street.

2.37 New development must be designed to have buildings with entrances and windows facing the street (active frontages) and no blank walls or gable ends. This provides long-term flexibility of buildings, creating activity and vibrancy in commercial areas and supporting a level of activity on quieter streets to create a good level of natural surveillance to deter criminal activity. This is particularly relevant to ground floor frontages, where maximising windows and doors is particularly important. In commercial frontages, views into shops and businesses, whether open or closed is also important.

Clear building lines: Clear boundaries defining where the fronts of buildings should be.

2.38 New development must connect easily with the surrounding area, not present barriers and be easy to get around. Traditional streets with buildings lining each side of the street, will contribute to defining space and the creation of clearly defined routes. Irregular building lines and building heights undermine this and should therefore be avoided.

Open space: The provision of public and communal amenity space.

2.39 All private, communal and public amenity space must be of a high quality of design, attractive, useable, fit for purpose and meet all policy requirements, including addressing issues of appropriate facilities, replacement space or identified shortfall. High quality designed amenity space will have good levels of privacy or public surveillance depending on their purpose and generally have an open aspect, good sun/daylighting, be of a single regular shape and have easy and convenient access for all potential users.

Defensible space: The space between the back of the footway and the front of the adjacent building.

2.40 Defensible space is the area or feature created to separate the public street and the buildings accessed from it. This space functions to provide adequate privacy for the private areas from the public ones. It is important in creating successful perimeter blocks and buildings with entrances and windows facing the street (active frontages) and no blank walls or gable ends. New development will be required to ensure all buildings fronting onto streets have successfully designed defensible space that are appropriate to the uses in the buildings.
Promoting biodiversity: Promoting the variety of plants, animals and other living things found in an area.

2.41 Development proposals should incorporate and promote biodiversity, through open space, street trees, green chains, SuDs and a variety of other means, including those more directly related to mitigating the effects of climate change. Biodiversity also adds visual attractiveness and local distinctiveness, which can also provide recreational facilities.

Promoting active design: Promoting design that enables healthy lifestyle choices.

2.42 The design of new development and streets must promote Active Design. This approach incorporates local facilities that are easily accessible on foot or cycle and create good quality, well maintained and safe places with convenient and direct routes throughout the development. The public realm should be designed to facilitate low vehicle speeds and reduced vehicle dominance. Active Design provides opportunities for people to be naturally active as part of their daily life, and so improves health and wellbeing.

Promoting sustainable development: Promoting the efficient use of resources that does not prejudice future generations from meeting their own needs.

2.43 New development should be designed to minimise emissions arising throughout their lifetime by making efficient use of land, resources, materials and energy. Such principles can include use of energy efficient building materials, appropriate design and construction methods and use of low-carbon technologies and renewable energy generation. New development should be sustainable in terms of supporting local social and economic development to support community development, making use of sustainable travel modes the first choice, encouraging community based car sharing schemes and facilitating improved health and well-being such as enabling local food growing and are encouraged to implement aims set out by the Merton Food Charter.

Permeable, legible and accessible layouts: Arrangements of streets and buildings that offer a convenient choice of routes that are east to understand.

2.44 New development should connect easily with surrounding neighbourhoods and not be seen as a separate place or result in restricted access. New neighbourhoods must be easy and convenient to get around, and be accessible for all users. Streets must be safe and look like they lead somewhere, be clearly and visibly connected to other streets. Well connected street layouts should encourage walking and cycling as well as allowing for convenient and clear vehicular access.

Density: The amount of development that is provided on any given site.

2.45 The London Plan density matrix should be applied in determining an appropriate density for each estate. Development that is too dense may result in cramped internal layouts, overlooking or daylight issues, or a high number of single (or nearly single) aspect dwellings. Development that is not dense enough will not use land efficiently and effectively or provide sufficient good quality homes.
Design principles

Parking provision: The amount of development that is provided on any given site.

2.46 On-street parking should be the initial choice for the way parking is provided. It is essential that on-street parking is well managed and integrated into the rest of the street. On-street parking creates activity, vitality and ensures a good level of natural surveillance. Only when on-street provision cannot accommodate all parking needs should other methods of parking be used. All methods of parking provision should be of a high quality design that is attractive, convenient and safe for both people and vehicles. The council follows the parking standards set out in the London Plan and residential standards reference should also be made to the London Housing SPG and subsequent updates.

Local context (buildings, materials interpretation, art): Using local good quality design to inform the design and appearance of new development.

2.47 The design, layout and appearance of new development must take inspiration and ideas from the positive elements of the local built, natural and historic context. This must include an analysis of what local characteristics are relevant and why, and which are less so. Opportunity must be taken to strengthen local character by drawing on its positive characteristics.
Part 03
Analysis and planning policies
The creation of sustainable well designed safe neighbourhoods with good quality new homes, that maintain and enhance a healthy local community, improve living standards and create good environments.
Introduction

3.1 Part 3 looks in detail at each estate in turn namely Eastfields, High Path and Ravensbury. It is arranged in four parts:

- Historical context
- Site analysis
- Issues and opportunities
- Site specific design policies

3.2 Part 3 begins by undertaking a detailed historical analysis. This identifies aspects of the historic character that can form the basis for inspiration for new development. It then goes on to undertake a comprehensive design based, site analysis. This is done at the wider area level and at the estate neighbourhood level.

3.3 At the wider level, the site analysis covers three areas:

- Character areas: This gives an idea of the general character of the wider area and how the neighbourhood fits into this.
- Current land use: This illustrates the location of and range of land uses close to the neighbourhood.
- Transport connectivity: This shows how well the neighbourhood is connected to its surroundings by foot, bus and train.

3.4 At the estate neighbourhood level the site analysis covers five areas:

- Building heights: The range of building heights on the estate and its surrounding area.
- Public realm and open space: The way all the space between the buildings is used, such as for roads, gardens and open space.
- Streets and frontages: The way the buildings are arranged and relate to the streets and spaces around them.
- Townscape analysis: The urban landscape, or general character of the area.
- Landscape analysis: Key positive and negative characteristics of the landscape of the area.

3.5 The analysis is followed by a summary of key issues each estate faces and the opportunities the regeneration of the estates present to address these issues.

3.6 This is followed by site-specific policies for any development proposals in the three estate neighbourhoods. These are expressed in the form of design led policies.

3.7 The site-specific policies are grouped under eight different headings. These are as follows:

- Townscape: How buildings and spaces should be arranged and their general character.
- Street network: The arrangement and layout of streets and what they should look and feel like.
- Movement and access: How streets should work in terms of how people get around, by foot, cycle and vehicles.
- Land use: Suitable land uses for each neighbourhood.
- Open space: The location and type of spaces that should be provided for each neighbourhood.
- Environmental protection: How to maximise opportunities for biodiversity and prevent flooding.
- Landscape: How each neighbourhood can use and building upon existing landscape assets to create high quality places.
- Building heights: Appropriate height of buildings in different parts of the neighbourhood based on the analysis of the area.
Analysis and planning policies - High Path
Location

High Path Estate

3.92 High Path is situated in Abbey Ward. The estate is located in South Wimbledon covers an area of approximately seven hectares. The area is bound by Merton High Street to the north, Abbey Road to the east, High Path to the south and Morden Road to the west. South Wimbledon Underground station on the north-west and the area on south-east of the estate which is defined by Rooney Place are excluded from the boundaries as shown in the image opposite.

3.93 The estates comprise 608 homes and is characterised by a mixture of architectural types. The estate was built according to a masterplan which was executed between 1950s-1980s, after the clearance of artisan cottages on land formerly part of the Merton Place estate. The earliest part just north of St. John the Devine Church consists of four storey towers arranged around courtyards. At the centre of the area are three high rise towers and adjacent to Merton High Street the scale gradually decreases down to four storey blocks and low terraces. Almost 60% of the provided units are CHMP tenanted properties and the remainder are privately owned.
Historical context

3.94 The High Path Estate is adjacent to Merton High Street which is at the core of the neighbourhood known as South Wimbledon. It was once a thriving high street however now feels placeless, congested and unsure of its identity. The High Path Estate has a central location within the neighbourhood. With frontages on Merton High Street and Morden Road, redevelopment of the estate provides the opportunity to repair the urban fabric and strengthen the identity of a place that is actually quite rich in local history.

3.95 During the Roman period the line of the Roman Road ‘Stane Street’, the major Roman thoroughfare from London to Chichester, crossed the River Wandle to the south-east of the High Path Estate through what is now Merton Abbey Mills. Stane Close on the High Path estate takes its name from this Roman association. During the Medieval period the area around this river crossing was developed as part of the Merton Priory estate. The main building of Merton Priory Church was located on the alignment of the Roman Road where it crossed the river to the south east of the High Path Estate.

3.96 The remains of the Priory complex are situated under the SavaCentre supermarket and Merantun Way road. The Chapter House is today preserved in a viewing chamber, visible from under Merantun Way. The names of roads such as Priory Close and Abbey Road make reference to this early monastic settlement. From the 17th century the former site of Merton Priory became commonly known as “Merton Abbey” and due to its proximity to the River Wandle and its mills, became a textile manufacturing centre.

3.97 Merton Abbey Mills is a small enclave of former textile factory buildings, which lie to the south west of the High Path Estate and is the site of the former Liberty of London silk printings works. The printworks buildings date from the 18th and 19th century and are the few remaining physical remnants of the area’s industrial past. Most of the buildings are either locally or statutorily listed. The textile industry further intensified in the area, which became home to two of the country’s major influences in textile design - William Morris and Arthur Liberty - who utilised adjacent factory buildings on the banks of the Wandle at Merton Abbey.
The wider area remained predominantly rural until the development of Merton Place upon which the High Path Estate stands. Merton Place was the most notable large house in the area. It was built on part of the old Merton Priory estate during the 1750s. It had a number of owners prior to its most famous residents Admiral Lord Nelson and Lady Hamilton. The estate consisted of 52 acres but most of the land was separated from the house by a turnpike road which is now Merton High Street.

After Nelson’s death the house was demolished in 1823. The estate was then sold in lots suitable for detached villas. The first Ordnance Survey maps from 1865 show the area as largely farmland dotted with some cottages or houses along Merton High Street. Central to the area were the remnants of Merton Place then known as Nelson Fields. Following its further subdivision into farmland the area became gradually developed by small scale housing – This was the first concentration of urban housing development in the area as long rows of cottages and other artisan dwellings were built along new roads such as Pincott Road and Nelson Grove Road.

In 1868, the Tooting Merton and Wimbledon Railway opened a branch line from the Wimbledon and Croydon Railway at Merton Park, cutting through Nelson’s former estate and the site of Merton Abbey to the east of Nelson’s Fields. Merton Abbey Station was built to the south east of the High Path Estate, directly on top of part of the Abbey complex. It served the then burgeoning industry in proximity to the River Wandle.

Most of the land surrounding Merton High Street remained undeveloped until the end of the 19th century. Around this time most of the residential streets that remain today were laid out. These remain quiet, desirable residential streets of Victorian and Edwardian terraces with roads names such as Victory, Nelson, Hardy, Hamilton and Trafalgar, all alluding to Lord Nelson. It was during this period that Merton High Street was developed with purpose built commercial buildings and began to acquire its character and role as a busy local shopping street and a distinct place. Growth was stimulated and assisted by the arrival of trams in Merton High Street. Today the Nelson Arms built in 1910 and situated on the High Street, marks the site of the lodge and entrance gates to Nelson’s Merton Place.

Another building in memorial to Nelson is the Grade II listed St. John the Divine Church and the adjacent Nelson Gardens. The church and gardens were built in 1913-14 to mark the anniversary of the death of Admiral Lord Nelson. The building and gardens are on the Nelson Trail, a walking route which encompasses a number of sites in the locality associated with the life of Nelson.

Today, one of the most prominent buildings in the area is the Modernist form of South Wimbledon underground station originally South Wimbledon (Merton) a Grade II listed station designed by Charles Holden and built in 1926.

Industrial uses in the surrounding area continued to intensify, particularly during the late 1920s. The combination of tram services and the extension of the underground from Tooting to Morden in 1926 reduced demand for passenger services on the Merton Abbey branch line, and these were withdrawn in 1929. Merantun Way, an incomplete attempt to by-pass Merton High Street and Kingston Road, was built along the former railway in the 1980s.

From the 1950s, the organically developed housing on Nelson Fields was gradually replaced with the current council housing now known as High Path Estate. The development of the estate was incremental over a number of years, from the 1950s to the 1980s. The name ‘Merton Place’ was given to a block of maisonettes which is thought to cover the site of Nelson’s former residence. There is a plaque on an adjoining terrace of houses on Doel Close making reference to the likely position of the house in the vicinity of Merton Place. However, it is clear that, as no plans of the original house have come to light, the exact location of house is unknown. Part of the High Path Estate is within the Merton Place Archaeological zone.
Historical context

3.106 The earliest part of the estate to be built is its western end, fronting Morden Road. It consists of 4-storey red-brick blocks arranged in courtyards by A. J. Thomas. The next stage to be built, at the centre of the area are the three high-rise towers which dominate the skyline. These are by William Ryder and date from 1964, 1968 and 1970. They were built according to a master plan of 1956 by Clifford Culpin & Partners and A. J Thomas. These prefabricated, 12-storeys, rectangular towers are arranged at an angle, in a row, surrounded by adjacent car parking and play area. The towers are built in a mix of red brick and concrete giving a striped appearance. The towers are set back from the street with murals on the ground floor walls depicting the local historical link to Lord Nelson.

3.107 Surrounding these towers, and comprising the central part of the estate, are blocks of flats of varying but similar sizes. These also date from the 1960s and are low-rise, 3-storey flats and maisonettes mostly in a mottled sandy coloured brick.

3.108 The last part of the estate to be developed was that fronting Merton High Street. This area dates from the 1970s and into the early 1980s. As recently as 1982, Will Miles Court – the most recent part of the estate - had not yet been built. This area consists of a number of short terraces of houses or small blocks of flats – the most recent ones designed to look like pairs of semi-detached houses. Buildings are two or three storeys and are finished in a darker red/brown brick. Much of this phase was completed by William Ryder and Partners.

3.109 Although there was an initial estate master-plan, and it could be said to have been conceived using Modernist principles, the piecemeal execution of the concept over three decades has undermined its successful realisation. There is lots of space between buildings, but no actual designed, designated public parks or gardens designed for people to use. There is a lack of distinction between roads and the parking courtyards they often seem to merge into each other with no clear sense of what is public or private. The estate has become a collection of poorly related buildings sitting in ill-defined spaces.

3.110 An array of remnants and buildings in proximity to the High Path Estate provide clues to the once rich local history, such as the Chapter House, St. John the Devine Church, Merton Abbey Mills and the Nelson Arms. These local features and historic associations also provide much inspiration from which to draw upon in the future regeneration of the estate.

1. Character areas

3.111 The map above shows the general areas of character in the area surrounding and including the High Path Estate. The estate itself is distinctive enough from its surroundings to form its own character area. Despite the varying ages and styles of the buildings it is clearly identifiable as public housing.

3.112 To the east is the Mill Road area, an enclave of modest Edwardian Cottages on a tight knit street pattern with some modest but interesting detailing. These are relatively isolated, hemmed in by the estate, Merton High Street, Merantun Way and the River Wandle. To the West, beyond Morden Road, is another larger area of similarly aged housing. This however, is less isolated and consists of larger houses in a wider mix of styles known locally as the Australians.

3.113 To the south of these residential areas lies the large expanse of Morden Industrial Area. This is physically isolated from the north by Merantun Way and High Path and the area around these streets is an unclear, fragmented mix of a range of different uses. It is also isolated on other sides by the River Wandle, tram line and Morden Road.

3.114 To the north of the residential areas is the commercial and retail street of Merton High Street and Kingston Road. This is a linear high street that in places has become fragmented and suffered decline in the past, but is seeing new investment and businesses in areas. This street is the community focus of the local area, centred around the tube station, but also suffers from acute congestion from local and through traffic.

3.115 To the north of the high street is a large predominantly residential area of traditional terraced housing, first developed in the late 19th Century. This is known collectively as the Wimbledon Grid and separates South Wimbledon from Wimbledon Town Centre. Today this area contains a variety of house types, sizes and ages, but the grid like street pattern remains the defining characteristic of the area.
Character area 1: High Path Estate

Character area 2: Mill Road

Character area 3: Brisbane Road

Character area 4: Morden industrial area

Character area 5: Merantun Way - High Path

Character area 6: Merton High Street

Character area 7: Traditional terraced houses typical of the Wimbledon grid
2. Current land use

3.116 The High Path estate itself is almost wholly residential, with just one shop on Pincott Road within the estate boundary. On the edge of the estate, is a small pub and community hall. There is a variety of land uses evident in the neighbourhood, to the north, there is predominantly residential and to the southeast, there is a concentration of industrial / commercial units. Along Morden Road, there are a number of big box trade retail units, towards the south of the High Path estate there is a mix of commercial / industrial units such as garages backing onto Merantun Way. To the south and south-east there are a variety of uses, sitting between High Path and Merantun Way, and along Station Road. This is a fragmented area and includes a school, church, industry, various vehicle related services and industries, offices and some earlier housing.

3.117 From Kingston Road to Merton High Street, there is a strip of shops, offices, pubs or commercial premises with active frontage onto the street. To the south-west and south-east are the Abbey Recreation Ground, Nelson Gardens and River Wandle, providing local open space. In addition to St. John the Devine Church on the High Path, there is Elim Pentecostal Church and Merton Evangelical Church on Grove Road. Merton Abbey Primary school is located south of High Path.
3. Transport connectivity

Public transport links are excellent with the area having a PTAL Level of 5. South Wimbledon underground station is located on Merton High Street, there are two tram link stops approximately 10 minutes’ walk to the south and west. There is also a relatively dense network of six bus routes serving Merton High Street, primarily linking Wimbledon and Colliers Wood. Wimbledon is 20 minutes’ walk away or a short bus ride, with mainline rail, tram and district line connections.
3.119 The map below shows how the estate was developed over a relatively long time, from the late 1950s to the early 1980s. The original 19th Century housing and shops fronting Merton High Street were gradually cleared to make way for each new phase of development. The long period of time taken to develop the estate means that it shows different types, styles and layouts of buildings, spaces and streets. It charts the changing philosophies and attitudes applied to how best to house people over a period of approximately 35 years.

4. Estate development timeline

|----------------|--------------------------------|-----------------------------|-------------------------------|-------------------------------|-------------------------------|
Site analysis

5. Existing building heights

3.120 The plan shows buildings on the estate and its immediate context in terms of the number of storeys or equivalent. This shows that, with the exception of the three 12-storey tower blocks, the building heights over the estate and surroundings are quite uniform, being within 2-4 storeys range. Commercial buildings along Merton High Street may seem a little higher than 3 storeys due to their generous ceiling heights. The only place where higher buildings are evident is fronting the west side of Morden Road. Spur house is under construction at 9 storeys and the adjacent car park has planning permission for a 7-storey equivalent building. Morden Road is wider than most other local streets and is a busy highway. This is probably the most appropriate location for taller buildings in the area.

Site analysis

6. Public realm and open space

3.121 The map above shows what all the space around the buildings is used for. The ‘figure-ground’ image on page opposite shows how little of the land is actually covered by buildings, so the use, layout and design of the spaces between buildings has a strong impact on how the estate feels and works. The map shows that there are large areas of footway, paving and grass that are simply a ‘setting’ to buildings. These areas have no active amenity value and in most cases are poorly defined and their purpose and relationship to buildings and ownership unclear.

3.122 There are also a lot of areas of tarmac dedicated to vehicle parking. There is no designated green public open space anywhere on the estate, and the formal play and exercise areas are fragmented around the estate and not easy to locate. These different types of space are fragmented and unplanned and prevent buildings from being arranged into recognisable streets similar to the surrounding area.

Key

- Communal amenity space
- Play / exercise area
- Incidental green space
- Pedestrian areas
- Parking courts
- Estate roads
- Front gardens
- Back gardens
Green spaces with little amenity value

Large areas dedicated to vehicle parking

Unplanned exercise area

Fragmented public realm

Poorly defined pavements and parking arrangement

Large areas of tarmac

Figure ground
3.123 The map above shows the contrast between areas of the estate that have a layout that creates spaces that feel like streets – with clearly and logically defined public fronts and private backs, and areas that lack this basic, clear structure. This is the backbone of a clear understanding of how to find ones way around and feel comfortable, safe and secure. It also indicates how efficiently an area is developed.

3.124 The arrangement of the buildings within High Path make it difficult for pedestrians to navigate around the estate. Front entrances facing rear gardens, lack of defensible space to ground floor units, unclear communal entrances to buildings and poor definition of backs and fronts to the buildings contribute to a confusing public realm in High Path.
Unclear communal entrance with blank street frontage

Rear of building block along street frontage

Poorly defined public realm

Lack of defensible space

Ambiguous front and backs

Unclear communal entrance
Site analysis

8. Townscape analysis

3.125 The map above shows an analysis of the ‘components’ or parts of the local area that shape people’s perception of it and encourage or limit movement around it. It gives a sense of how the estate is connected to and relates to its immediate surroundings. This includes things like views, vehicle and pedestrian access, local landmarks and focal points for activity or orientation. These are identified as being strong or weak, positive or negative, and give ideas as to what new development could do to improve connections with the wider area.
The three tower blocks dominate the skyline

South Wimbledon underground station

Nelson Arms on Merton High Street

St. John the Devine Church
Site analysis

9. Landscape analysis

3.126 The High Path estate has a lot of incidental open green space but lacks significant high quality landscape, particularly trees. This plan shows the few places where there are important tree groups that are positive landscape features that would be worthy of retention in any regeneration proposals. These are primarily fronting Merton High Street and on Hayward Close, with a few other smaller groups within the estate. Also included is a general assessment of the landscape quality of the spaces between buildings and on the edges of the estate.
Some buildings on High Path Road have a negative visual impact

Lack of defined street frontage on Pincott Road

Issues and opportunities

Issues summary

Street frontage to Merton High Street
3.127 This undermines the commercial functionality and potential of the street and puts residential uses in an uncomfortable relationship with the busy commercial street. It also fails to physically define the street as a space, undermining its identity as a place.

Sense of place and active frontage on Morden Road
3.128 The varied arrangement, height, position and function of the buildings fronting this street undermines its ability to develop any distinctive identity. The lack of proper active ground floor uses undermines the commercial potential close to the tube station and creates an unattractive place, lacking in character and sense of identity, that does not function well as main street.

Mix of building styles, forms and orientation
3.129 This creates a lack of coherence in form and character, mixes up fronts and backs and dismantles the traditional street pattern as most buildings fail to address the streets, turning them into functional access roads.

Development density
3.130 The site has high PTAL levels and could sustain a much higher density whilst still providing high quality homes and amenity spaces subject to meeting all other relevant policy considerations. The arrangement of buildings and piecemeal development of the estate results in lots of space between buildings and unused garages, but hardly any functional, good quality public open space.

Connections to surroundings
3.131 Whilst there are remnants of a historic street pattern, this has been modified into a series of cul-de-sacs that make easy navigation around the estate unclear. This, and the building types and spaces, make the estate an uninviting place to move through. There are perceptual and physical barriers to movement between the estate and its immediate surroundings both for vehicles, cyclists and pedestrians.

Nearby buildings and sites
3.132 Some buildings adjacent to the estate are assets and should inform the design and layout of new development – for example Rodney Place. Others have a negative influence - particularly the varied buildings and sites between High Path, Station road and Merantun Way. These affect perceptions of the area and accessibility to the adjacent area and its uses and facilities.
Issues and opportunities

Opportunities summary

Frontage to Merton High Street

3.133 The street frontage on the south side of Merton High Street is at present fragmented, this could be repaired by the creation of a defined building line with active frontage on ground floor which will contribute to the vitality of the street.

Frontage to Morden Road

3.134 This is a street with a poorly defined frontage and broken character. The redevelopment should take the opportunity to develop Morden Road as a wide, straight, boulevard linking the area with Morden with building frontages of an appropriate scale for a wide busy street.

Create a clear internal network of clearly identifiable streets

3.135 Reintroduce traditional street layouts. Streets are defined by the buildings that face them and the interaction they have with the public realm. These should have proper frontages with entrances facing the street and be laid out to create an easy to navigate and attractive network of routes across the estate. They should be based on the pre-estate historic street pattern that remains in the form of Nelson Grove Road, Pincott Road and High Path.

Use land efficiently and create a consistent urban character

3.136 Use land more efficiently by ensuring there is no leftover space and every space is designed to have a clearly defined use. This means increasing densities and ensuring open space is well located, well designed, functional and attractive. Presently the estate is a disparate mix of building styles and ages, regeneration of the estate presents the opportunity to create a consistent urban character.

Good quality landscaping and vegetation

3.137 There are a few key groups of trees and the impressive trees fronting Merton High Street, groups in courtyards and the avenue of mature trees on Hayward Close. These assets should inform the location and design of new buildings and be maintained unless there are other compelling reasons that provide benefits to outweigh this.

Attractive and functional open space

3.138 Existing recreational facilities could be better located and grouped to provide well defined and attractive spaces for residents. There is also scope to provide specific new public open space for passive as well as active recreation. Although this could be done in a variety of ways it should be based on utilising the existing historical character and landscape assets of the estate.

Improved links into the estate

3.139 Poor pedestrian facilities, dominant and uncoordinated highway infrastructure, and traffic congestion on main roads make it difficult to enter and exit the area and should be improved. The Council's aspiration is to improve the public realm on Morden Road and Merantun Way by creating a better balance between vehicles and pedestrians. The aspiration could be achieved by encouraging the development of boulevards for these roads. This would enable them to become a more integral part of the surrounding area. Specific improvements that could be made are simplifying the junction of High Path, The Path and Morden Road and creating an attractive entrance and enabling views to Merton Abbey Mills. Future links to the south of Merantun Way should be planned for as well as east-west quiet-ways for cyclists and pedestrians.
Adjacent development potential

3.140 Proposals for the estate land should be designed so as to seamlessly knit into the surrounding area and enable integration of adjacent sites if or when they become available for development. This means designing streets, uses, densities and heights that are based on a thinking that goes beyond the current estate boundaries. These can then be used as broad guidelines for development of these sites in the future. Development should also be mindful of the council’s aspiration to encourage the development of boulevards for Merantun Way and Morden Road which create a better balance between vehicles and pedestrians.
Site specific policies

Policy

EP H1 Townscape

a) Provision of a continuous building line fronting the street, punctuated by side streets into the estate, to the south side of Merton High Street, with buildings with entrances and windows facing the street (active frontages) and no blank walls or gable ends.

b) Discussions will be required with TfL to understand how proposals for a tram from Morden Road Tram Stop to South Wimbledon underground station including a new tram terminus, can be incorporated as part of any alterations to Morden Road.

c) Streets should be designed to allow for clear unobstructed views along the whole length of the street particularly along Pincott Road and Nelson Grove Road.

d) The key entry points into the estate at either end of Pincott Road and Nelson Grove Road, are the most suitable locations for landmark buildings. Other suitable locations could be at the junction of High Path and Morden Road (low-key) and in the vicinity of the junction of Abbey Road and Merantun Way.

e) Design of a space as a focal point highlighting the significance of the areas local history particularly its connection to Lord Nelson.

f) Design of the estate should be well integrated into the surrounding area.

3.142 The new estate needs to ensure its built form gives clear definition of private and public space and a range of appropriate landmarks, views (vistas) and focal points to aid orientation around and within the estate.

3.143 Creation of clear and unobstructed views through the design of streets are important to find their way around (legibility) the estate and to physically and visually link the estate to the wider area.

3.144 The Tramlink extension proposals are still at a feasibility stage. Therefore early engagement with TfL will be required to inform development proposals for this site.

3.145 This engagement may also open up opportunities to improve the quality of Morden Road by enabling the creation of a consistent street width with parallel building lines, tree planting and appropriate building heights either side of the street.

3.146 Landmark buildings should be designed to be sympathetic to surrounding buildings and spaces.

3.147 Designing of the estate to ensure it seamlessly integrates into the surrounding area. In addition it will also help enable any future development on adjacent sites and the wider area such as the area to the southern side of High Path and northern side of Merantun Way. The creation of streets that meet the edges of the estate and can go beyond them at a later date is therefore a key element.

Justification

3.141 Orientation and getting around (legibility) within the estate is difficult mainly because of the siting of the current buildings. There is poor definition of streets and spaces and a lack of built or landscape enclosure to aid this making it unclear where the private or public spaces are.
Site specific policies

Required

EP H2 Street network

a) Nelson Grove Road and Pincott Road, provide appropriate basis for the design of the new street network and should form the basis of the main routes into and out of the estate. Extension of Nelson Grove Road from Abbey Road in the east to Morden Road in the west will help provide an east to west link, with clear views along its whole length.

b) The position of the historic street of High Path should be retained and the road should allow for improved accessibility from High Path to Nelson Gardens. The road should also respect the setting of St John’s the Divine Church.

c) Retention of Hayward Close which complements the historic street pattern, with its attractive tree-lined character.

d) Design to increase accessibility for pedestrians and cyclists.

e) Retention of the existing level of vehicular links along Merton High Street.

f) Enable future extensions of the north-south streets ending at High Path to Merantun Way subject to TfL’s support.

Further guidance

3.148 A new north-south street between Hayward Close and Pincott Road, linking Merton High Street and High Path to help link the estate with the surrounding road network.

3.149 North-south streets between Pincott Road and Abbey Road, linking Merton High Street and Nelson Grove Road. These new streets would help connect the new neighbourhood effectively with the existing grid pattern layout and also ensure efficient block pattern layout.

3.150 Layouts should be designed to allow for pedestrian access from South Wimbledon tube station into the estate, should TfL support a second tube station entrance/exit in the future. This could be located to the rear of the station building that links Morden Road and Hayward Close. This would increase public transport accessibility and provide additional pedestrian routes into and out of the new neighbourhood.

3.151 Mews Street style development should be reserved for shorter streets such as Rodney Place.

3.152 Whilst Rodney Place, is outside the estate boundary, linking it into the street pattern of the estate would help improve links within the area and make it easier to get around.

Justification

3.153 Development of a new network of streets should ensure that the neighbourhood is easy to get around and understand and accessible for all users. This includes ensuring clear and seamless links between the estate and the surrounding neighbourhoods (which do not currently exist), and brings the grid-iron network of streets to the north of the estate. The new street network supports the ‘New London Vernacular’ guiding characteristic for High Path Estate which is explained in more detail in Section 3 of the Plan.

3.154 The creation of traditional streets north to south will help integrate and re-connect the estate to its surroundings. The creation of clear east to west link will help bring together all the different new character areas and offer a safe cycle and pedestrian priority link across the estate.

Site specific policies

Policy

EP H3 Movement and access

a) The main vehicle routes within the estate are currently Pincott Road and Nelson Grove Road, which are located centrally within the estate. Their character and layout should resemble a traditional street and serve the needs of all users, without the need to provide separate or segregated facilities for cyclists.

b) Streets in the estate should connect in an open and easy to understand way that encourages movement by pedestrians and cycles. All streets should be safe, attractive and sociable places designed so as to manage vehicle speeds. Where streets are closed to vehicles at one end they should not restrict the possibility of vehicular movement in the future.

c) Discussions will be required with TfL to understand how any proposals for a tram link extension to South Wimbledon underground station including a new tram terminus can be incorporated as part of any development proposals.

d) The inclusion of measures to reduce the physical barrier (severance) caused by Morden Road to east-west pedestrian and cycle movement to better link The Path and Milner Road.

e) The pedestrian and cycle access from the south-east corner of the estate towards Abbey Mills and Merantun Way should be improved in quality, including better pedestrian facilities on the roundabout serving Abbey Mills, and reassessment of the siting of the existing pedestrian crossing by the River Wandle Bridge and its approach from Abbey Road.

f) Parking should preferably be provided on-street in well designed places.

Further guidance

3.155 Consider the viability of removing vehicle movements from High Path into Morden Road in conjunction with the early plans for the South Wimbledon tram spur.

3.156 Scope exists for Abbey Road to be continued directly southwards to make a new junction with Merantun Way to make a more easy to navigate road layout. This could simplify the layout and the amount of road space taken. This approach could also support the siting of new bus stop facilities in the area.

3.157 Off-street parking should preferably be provided in full undercrofts at basement level, rather than ground level parking with communal garden podiums above.

3.158 Should the land between High Path and Merantun Way become available for redevelopment this could provide the opportunity for a more comprehensive redesign of Merantun Way to form a boulevard style street with footways and segregated cycle lanes either side, whilst still maintaining its important movement function.

3.159 Proposals directly or indirectly affecting Merantun Way or the wider Strategic Road Network need to be discussed at an early stage with Transport for London.

Justification

3.160 Bounded by main roads including the A24 Merantun Way, A219 and A238 and the River Wandle the High Path Estate is well positioned within the road network. Vehicular access is managed to deter through movements by non-residents. Access is limited to a one-way entry point into Pincott Road from Merton High Street and side road accesses from Abbey Road and High Path. From the south the main access point at the junction of Station Road and Merantun Way, where traffic movement is restricted to left in and left out only. The surrounding busy road network creates physical barriers to movement, especially for pedestrians and cyclists. This is particularly acute on Morden Road and Merantun Way and reinforces the need to better connect the estate to neighbouring areas.
3.161 Similarly where the River Wandle crosses Merantun Way this stops the estate from connecting with the wider surrounding area. Reviewing movement and crossing opportunities could help ease some of these connectivity issues.

3.162 Due to high traffic demand and widespread congestion in the local area this road connectivity brings specific problems to the estate. This essentially relates local streets, notably Abbey Road being used as a cut through to avoid the heavily congested South Wimbledon junction on the north-west corner of the estate. Physical measures are widely applied across the area to constrain traffic speeds. Regeneration of the estate provides an opportunity to tackle some of these problems by making features which reduce traffic speed integral to the street design.

3.163 Within the estate many of the pedestrian and cycle routes are poorly defined, which makes it difficult to distinguish between public and private areas. The building layout makes the estate feel unsafe and unwelcoming.

3.164 High Path Road runs along the southern boundary of the estate. The road is traffic calmed and the western section beyond Pincott Road is one-way towards Morden Road where it also passes Merton Abbey Primary School and St John’s the Divine Church. The vehicular exit onto Morden Road is restricted to left turn only, this manoeuvre can be particularly acute for large vehicles due the limited amount of turning space available. A cycle facility also operates along the northern footway.

3.165 Although parking is restricted along High Path Road, localised congestion frequently occurs during school peak times. To improve cycle access it may prove necessary to further restrict vehicle movements by closing the western end of High Path to vehicle traffic, although careful consideration of the impacts on the school and alternative traffic routes will need to be fully understood. How any changes interact with outline plans for the South Wimbledon Tram extension will also need to be identified.

3.166 More recently demand forecasting work by TfL has suggested that current annual passenger demand is expected to rise from 31 million to around 56 million by 2031 even without Crossrail 2, which would serve the nearby Wimbledon town centre. This growing demand would significantly impact on passenger levels thereby supporting the case for new tram extension and capacity. The proposal extension from Morden Road Tram stop to South Wimbledon offers the potential to help meet this growth. Further engineering feasibility work is being undertaken during 2015 to better understand potential impacts.

3.167 Preparation of development proposals will require the applicant to undertake discussions with TfL to determine the exact limits of land required to enable future delivery of the supporting transport infrastructure. Delivery of the South Wimbledon Tram extension would increase the attractiveness of public transport connectivity in an area identified for intensification in the London Plan and population growth.

3.168 Located beside South Wimbledon underground Station the estate is attractive to commuters to central London. Overspill parking from nearby businesses have also encroached onto public streets serving the estate. This has necessitated the need for widespread parking controls to reserve the limited parking spaces for resident use only.

3.169 Well-designed parking provision helps create activity, vitality and provides overlooking of the street (natural surveillance) on the street. Where provision of parking is on-street to ensure that this is arranged and managed in a sensitive manner. For off-street facilities the preference for parking to be provided in full undercrofts at basement level avoids the creation of -residential units with windows only located on one side of the building (single aspect) at ground level that are difficult to design well internally and restrict the type of residential units that are possible. It is expected that parking controls will need to be retained to ensure that parking is available for residents.

Improved cycle and pedestrian access.

Extension of Abbey Road to create new junction.

Reduce severance on Morden Road.

Improve pedestrian and cycle links to Merton Abbey Mills.

Potential new access street.

Merton High Street - Kingston Road - Morden Road (Strategic Road Network).

Merton Road (London Distributor Road).

Abbey Road.

High Path.
**Policy**

**EP H4 Land use**

a) The primary land use for the site will be residential, to accord with the predominant land use of the existing site and surrounding area.

b) Development proposals must make more efficient use of the land by building in accordance with the London Plan density matrix that are higher than current and improving the urban design quality of the estate.

c) In general, the residential density should be higher in the north-west corner of the site, gradually reducing towards the south-east, where the public transport accessibility (PTAL) is lower and there are smaller scale developments (e.g. Rodney Place) or more local streets (e.g. High Path).

d) All new buildings must be provided that maximise the number of entrances and windows facing onto the street (active frontages) and for residential uses must provide well defined private space between the front of the building and the street (defensible space) e.g. for landscaping and the storage of bins etc.

**Further guidance**

3.170 Wherever practicable, different types of residential development (e.g. apartments, maisonettes and houses) should be located on the estate based on reinforcing local character.

3.171 Different street types should support residential types that are suitable to them. Therefore smaller scale, shorter and narrower streets will be more suitable for town houses and mews development. Wider, longer streets, with more vehicular traffic, will be more suitable for flats and maisonettes.

3.172 The frontages to Morden Road and Merton High Street may, be appropriate locations for the provision of a wide range of commercial and community uses to support the new development subject to meeting relevant Local Plan policies.

**Justification**

3.173 High Path and the surrounding area are predominately residential. High Path is located within an area with a good level of Public Transport Accessibility (PTAL). In accordance with the London Plan density matrix, regeneration offers opportunities to make more efficient use of the land with higher density development. Applying this matrix indicates and taking account of the existing number of homes, indicates a range of 608 - 1,802 (gross figure) new homes for this site and the council’s expectation is for development proposals to be at the higher end of this range.

3.174 Development proposals should contribute to the provision of a greater choice and mix of housing types sizes and tenures, including affordable housing provision, in accordance with relevant Local Plan policies (e.g. Core Planning Strategy Policies CS8 and CS9 and Sites and Policies Plan Policies DM H1, H2 and H3). Proposals should seek to provide a mix of housing types, sizes and tenures to meet the needs of all sectors of the community. In accordance with policy DM E4 (Local Employment Opportunities) major developments proposals will be expected to provide opportunities for local residents and businesses to apply for employment and other opportunities during the construction of developments and in the resultant end-use.
3.175 The site is bounded by major roads on two sides, lined predominantly by shops, cafes, restaurant and similar uses. Subject to meeting the Local Plan policies, provision of such uses (e.g. retail shops, financial and professional services, café/restaurants, replacement of public houses, community, health, leisure and entertainment uses) may contribute to meeting the day to day needs of the local population. This would complement the area and provide services and facilities that may be needed. This also supports the principles of local context, sustainable development and active frontages. Within the estate the location of types of residential use should support the guidance on density and character and match residential type with appropriate street types.

3.176 Based on the Local Plan - Sites and Policies Plan Policy DM R2 the council supports the replacement of the existing convenience shop (i.e. shop selling everyday essential items) in Pincott Road. Any proposed new local convenience shop which is located outside the designated town centre and parades boundary and is above 280 sqm will be subject to sequential test and impact assessment.
Chapter 03: Analysis and planning policies - High Path

Part 03: Analysis and planning policies - High Path

**H4 Land use**
- **Primary land use**: residential
- **Commercial and community**: (subject to meeting relevant Local Plan Policies)
- **Higher PTAL - higher density**
- **Lower PTAL - lower density**
Site specific policies

Policy

EP H5 Open space

a) Development proposals must provide public open space to address the identified deficiency in access to Local Open Spaces in accordance with London Plan Policy 7.18 ‘Protecting Open Space and addressing Deficiency’.

b) Suitably designed plays space(s) for all age groups need to be provided in accordance with the Mayor of London’s ‘Play and Informal Recreation’ supplementary planning guidance document (2012).

Justification

3.180 The estate is within easy access to a variety of public parks including Nelson Gardens, Wandle Park, Nursery Road Recreation Ground and Haydon’s Road Recreation Ground. However, following a review in 2015 of the public open spaces surrounding the Draft Estates Local Plan sites updated Greenspace Information for Greater London (GiGL) calculations show that a relatively small area (0.5ha) on the eastern part of the site, near Doel Close and Merton Place, is deficient in access to Local Open Spaces (please refer to GiGL’s revised June 2015 maps, which are attached in Appendix 2).

3.181 Development proposals should demonstrate how the proposed new public open space would address the identified deficiency in access to public open space and that the appropriate minimum standards concerning the provision of outdoor amenity space and play space have been achieved.

3.182 Where the provision of a large public open space is justified, the design of the space should be flexible enough in terms of scale, layout and design so that it is capable of accommodating a variety of activities such as food growing, running tracks, playgrounds, sports courts, informal and flexible space which can support occasional use for a broad range of community events.

3.183 Similarly, provision of a group of mid-sized spaces and pocket parks could create areas of local human scale and intimacy that have local relevance, good surveillance and are used largely by the local community.

Further guidance

3.177 The number of open spaces and their individual size is not prescribed. Open space can be provided in the form of a single space or a number of smaller spaces. However, proposals intending to provide a multifunctional space should preferably provide one large area.

3.178 Open space should be located in the most accessible points for all residents of the new neighbourhood. Open spaces should be situated in relation to size and function for example larger spaces should be centrally located and smaller spaces evenly distributed across the neighbourhood to ensure all residents have access to open space. Deciding the location of public open space should where possible take as its cue, the existing mature vegetation on the site and incorporate this into any new public spaces.

3.179 The individual design of public open spaces, themes and vegetation used, should have some local relevance, and include public art in a range of forms and media.
Mature tree groups to inform design of open spaces
Indicative locations of mid sized open spaces
Indicative location of large open space
Existing open space

---

*Abbey Road*
*Rodney Place*
*Moran Road*
*Nelson Gardens*
Site specific policies

Policy

EP H6 Environmental protection

a) Retention of the existing mature tree groups and street trees including the trees fronting Merton High Street east of the junction with Pincott Rd are to form the basis of new open spaces and a network of biodiversity enhancing green corridors across the estate.

b) Public and communal open spaces must contribute to the creation of an efficient system for surface water run-off via SuDS and the enhancement of biodiversity.

c) Planting of new street trees on Pincott Rd and Nelson Grove Road to form the basis of a green corridor network across the estate based on the existing avenue of Hayward Close.

d) Sustainable Drainage Systems (SuDS) must be part of any development proposal and can include a range of measures such as rain gardens, green roofs, filter strips, green verges and swales; these should be designed to reduce post development runoff and provide water quality, amenity benefits and enhance biodiversity.

e) Developments proposals will need to include appropriate flood mitigation measure in accordance with national, regional and local planning polices to ensure the development is safe and does not increase the risk of flooding to the development and to surrounding area. The proposed development must aim to reduce post development runoff rates as close as possible to greenfield rates set out in London Plan policy 5.13 and the Mayor of London’s sustainable design and construction supplementary planning guidance published and the government National Standards for Sustainable Drainage which sets out the requirements for the design, construction operation and maintenance of SuDS. The development must be designed to take into consideration flow routes should flooding occur, i.e. designing for exceedence

f) The feasibility of CHP and district heating must be investigated. As a minimum this should include:

(i) An assessment of the secondary heat sources within a 400 metre radius of the site boundary (e.g. river water heat recover from the Wandle, heat extraction from the London Underground).

(ii) Evidence to demonstrate engagement with key stakeholders associated with the potential secondary heat sources such as transport for London and Environment agency have been full engaged in the development of the feasibility.

(iii) Consideration of air quality issues should include an investigation in to the potential benefits that a district heat network could deliver to the wider area through the connection to existing buildings or development sites outside of the high path regeneration.

Further guidance

3.184 Retention and management of the mature and semi-mature vegetation on the south side of High Path where possible to further develop a network of green routes across the estate.

3.185 An open section of the Bunces ditch (which is a designated main river) flows to the south of Merantum Way. There is a possibility that the upstream section of the culverted historic watercourse flows across the High Path estate and this should be fully investigated with a view to presenting opportunities for deculverting, where possible.
Justification

3.186 The early design stages for any development proposals for the estate provides opportunity to incorporate landscaping and permeable surfaces that enable biodiversity and reduce surface water run-off. Currently, whilst there is a lot of space between buildings, this is very poorly defined, and much of it is hard-standing. This leaves little opportunity for biodiversity or good natural drainage/ SuDs.

3.187 There are, however, areas with groups of mature and semi-mature trees that can form the basis of green corridors, sustainable urban drainage and a sustainable ‘green’ network of spaces across the estate. They should help to link the estate with Abbey Recreation Ground to the west and the River Wandle to the east.

3.188 The close proximity of the River Wandle puts the estate close to the fluvial flood plain and areas of the estate are at high risk of surface water flooding identified on Environment Agency flood maps, so it is important that its redevelopment does not increase any local flooding issues and where possible, seeks to improve matters.

3.189 Local environmental conditions such as air quality, noise and over heating must be taken into consideration during the design process. Careful consideration should be taken in order to ensure that efforts to mitigate against these issues does not resulting in unforeseen negative impact on the others.

3.190 Consideration of air quality issues is important in order to understand the long term air quality benefits that might arise from the growth of a district heating network with the High Path Estate as an energy centre nucleus.
H6 Environmental protection

Mature tree groups to inform design of open spaces
Conservation of vegetation south side High Path
Create green chain based on arcual or new open spaces
(linking to existing open spaces)
Develop green chain towards Wandle River
Green chain network of street trees
Site specific policies

EP H7 Landscape

Required

a) Retention of:

i) the existing mature tree groups and street trees including the trees fronting Merton High Street east of the junction with Pincott Road;

ii) the tree planting along Hayward Close should be continued along the whole length of the street to strengthen the attractive ‘avenue’ character of this street;

iii) the mature tree(s) in the vicinity of the playground within the ‘Priory Close’ block;

iv) the line of mature trees in the car park between the ‘Ryder House’ and Hudson Court’ blocks;

v) the mature trees in the playground to the north of the ‘Marsh Court’ block.

vi) the mature trees to the west and south of the ‘Merton Place’ block, and to the north of the ‘DeBurgh House’ block.

b) Landscaping must be a key feature in the provision of private space fronting houses and blocks of flats (defensible space). Frontages must be designed to incorporate where feasible soft landscaping, appropriate planting and permeable surfaces.

c) Street trees should be located to enable the creation of well defined on-street parking spaces. This will soften the visual impact of vehicles and enhance the street.

d) Landscaping the public open spaces and communal gardens must be of the highest quality, accessible and meet the needs of the residents by complying with the relevant policy requirements.

Further guidance

3.190 Retention of the mature trees fronting Merton High Street west of the junction with Pincott Road.

3.191 Retention and good management of the mature trees and vegetation on the south side of High Path.

3.192 Retention of any tree identified by the council’s arboricultural officer and illustrated in the accompanying map.

3.193 Provision of a good variety and quantity of street trees.

3.194 Consideration for soft landscaping in streets in terms of its appropriateness, robustness and maintenance.

Justification

3.195 Retention of trees has clear benefits in promoting biodiversity, sustainable development and contributing to flood risk mitigation and help reduce air pollution.

3.196 Retaining trees, as with historic streets, provides the basis from which to develop design proposals.

3.197 Landscaping has the potential to improve the quality of a place, but this will only work if it is appropriate to the location and there is a clearly defined, funded and managed maintenance regime in place.
Mature trees to the west of the junction with Pincott Road

Mature trees within 'Priory Close' block

Mature trees in car park between 'Ryder House' and 'Hudson Close' blocks

Mature trees to the west and south of 'Merton Place'

Mature trees to the north of 'Marsh Court'

Trees lining Hayward Close

Mature trees groups and street trees fronting Merton High Street east of the junction with Pincott Road

Mature trees within Priory Close block

Landscaping integral element of historic and indicative street alignment (Tree planting / soft landscaping / SUDs where appropriate)
## Site specific policies

### Policy

**EP H8 Building heights**

**a)** The general building height across the site should be 5-6 storeys with variations (outlined below) in order to create a consistent height profile and street character that visually links with the surroundings.

**b)** Buildings fronting Merton High Street will be restricted to 4 storeys (with potential for a 5th storey setback) to ensure the environmental quality of the street does not unduly suffer from shading and blocking of sunlight.

**c)** Buildings fronting Morden Road should be 7-9 storeys to be similar to the existing and potential building heights on its west side and ensure a consistent and even street character.

**d)** Buildings on the west side of Abbey Road should be up to 4 storeys to relate well to the existing housing on the east side and newer flats on the west side.

**e)** Building heights along High Path should be 3-4 storeys in height to reflect its historic character as a narrow historic street and ensure that it sensitively takes account of the setting of St Johns the Divine Church.

**f)** Land outside the estate boundary fronting Merantun Way is suitable for buildings of 7-9 storeys to promote the transformation of this road into a boulevard street.

**g)** Where Station Road, Abbey Road and Merantun Way meet is a sensitive area as there are likely to be awkward shaped sites. The close proximity of Rodney Place and Merantun Way create a need to respect existing low-rise development and make the most of the potential for taller buildings fronting Merantun Way. Storey heights in this general area should rise from 3-4 storeys to 5-6 storeys.

### Further guidance

**3.198** The potential widening of Morden Road to accommodate a tram extension needs to be taken into consideration, should this proposal go ahead, the resulting adjustment to street proportions may better accommodate taller buildings on the east side of Morden Road, however the transition to lower buildings further east into the estate and effects on the visual environment must be properly managed and designed.

**3.199** Building heights along the lengths of streets should be similar or the same on either side in order to maintain a consistent character.

### Justification

**3.200** The existing estate has a wide range of building styles and heights. A more even distribution of heights will reduce these negative characteristics and help new development fit in comfortably with its surroundings. It will also create neighbourhood streets that are easy to get around. In order to fit well with the surroundings, it is important to ensure building heights on the edge of the estate relate appropriately to those adjacent to it.
H8 Building heights

- Merton High Street: 4 storeys with 5th storey setback
- General building height: 5-6 storeys
- Morden Road: 7-9 storeys
- High Path: 3-4 storeys in sensitive areas
- Merantun Way: 7-9 storeys
- Station Road, Abbey Road & Merantun Way (sensitive area)
Part 04
Design codes
Artist's illustration of Rowan Park, Merton - now completed
Design code requirements

Introduction

4.1 This part of the Plan requires the applicant to submit their own design codes for any development proposals. It gives detailed guidance to applicants on aspects of design that they will be expected to focus on in more detail to demonstrate that the Vision, Principles and Site-Specific Policies of the Plan are met.

4.2 At the planning application stage, the applicant, will be expected to include as part of their application, a set of design codes that guides the development of each phase of the redevelopment. This should include, but not necessarily be limited to, a number of specific subject areas outlined below. The following guidance lists the subject areas that must be covered and gives guidance on how these subjects will be expected to be addressed.

4.3 Notwithstanding the requirements of the council’s validation checklist the applicant will be required to provide information to address the following:

Design Codes

Architecture and elevations

4.4 A design code is required in order to set out the approach intended to guide architectural style and the design of building elevations. A general approach to architectural style should be defined in the code that creates a palette of common characteristics in basic architectural features, such as materials, height and proportions, yet allows scope for individual creativity for each building and phase. This code should also contain specific guidance on the appearance of elevations, notably to ensure they contain sufficient three-dimensional depth, human scale detail, visual interest and that sufficient attention to detail is given to the design of windows, their materials, proportions and depth of reveals.

Materials

4.5 A design code is required in order to define a general palette of materials and where they should be used on the estate and on buildings. This should build on the code for architecture and elevations and support the visions for each estate that are complementary to their context.

Landscape and biodiversity

4.6 A design code is required to set out the landscaping principles and strategy for each estate. This should build on the existing landscape characteristics of each site and detailed policy guidance indicatively, specifying planting types and species and locations. It should make reference to tree surveys of the sites and provide guidance and reasoning on their protection and integration into the new estate layout.

Flooding and drainage

4.7 A design code is required to set out a strategy and plans for flood mitigation and drainage measures for all estates. Based upon the findings of any required flood risk assessments, methods of mitigation should be detailed along with their location and extent where relevant.

Internal space standards

4.8 A design code is required to set out principles for adhering to National Planning Policy, London Plan and the Mayor’s Housing SPG requirements on residential internal space standards. The philosophy should be to design beyond the minimum space standards, not to them.

Building and dwelling layouts

4.9 A design code is required that sets out principles for building layouts. This should include defining guidelines for the design and location of entrances, stair cores, refuse storage and in-building cycle storage. This should also address issues such as dual aspect and flexibility of living spaces. Example dwelling layouts should be shown that demonstrate how rooms use space efficiently by using regular plan forms and allow for different arrangements of furniture. Awkward shaped rooms and wasted space due to poorly positioned doors for example, should be avoided.
Building to street interface

4.10 A design code is required to set principles of how buildings meet streets to manage the transition from the private to the public realm. This code should give clear guidance on how to create a transition zone between public and private space by the creation of ‘defensible space’, how natural surveillance will be created by maximising front doors and habitable rooms at ground floor level. This should also include reference to the design, size and content of defensible space, such as its use for bin and cycle stores, planting and personalisation. The code should also include how digital services will be provided, identifying locations for communal TV aerials and satellite dishes. Individual dishes will not be permitted on elevations facing the street as they have a negative visual impact on the street scene.

Amenity space

4.12 A design code is required that sets out how all amenity space is to be provided. This must include adherence to existing relevant standards. This should cover front and rear gardens to houses, communal and private space for flats, frontage landscaping or front gardens for blocks of flats and public open space. The code should also include qualitative guidance relating to issues such as shape, useability, microclimate, sunlight/daylight, general outlook and issues of privacy and security.

Refuse storage and collection

4.13 A design code is required to detail a strategy for the design and operation of refuse storage and collection. Refuse stores must be convenient for residents and for collection, be robust and well integrated into buildings and accord with the Council’s guidelines on this. Flats should have communal bin stores. Houses must have bin-stores within the property boundary of each dwelling that are well designed and integrated into the front defensible space. Bin stores for houses should not form part of a communal system.

Street design characteristics

4.11 A design code is required to set out principles for the design of streets. This should define different street types and set out how space will be used. This should include all space between building elevations and be based on the creation of traditional, recognised street forms as linear public spaces. The code should show how it promotes the provision of on-street parking as a first-choice means of provision and how it will integrate with street trees, street furniture and avoid on-kerb parking. For example parked cars could be interspersed with build-outs with trees where appropriate, build-outs also enable additional crossing points and space for landscaping on a street. A palette of surface materials and street furniture should form part of the code, as well as landscaping guidance. The code must contain guidance that creates liveable, attractive streets by having street width to building height ratios that ensure taller buildings do not create oppressive environments at ground level.

Building proportions as well as height need careful consideration. Traffic management measures must be in-built into the overall street design and not appear retrofit or distort or undermine the overall character of the street as a linear space with a movement function.

General requirements

4.14 All codes should provide an appropriate level of technical and graphic detail which is easy to understand and use by non-technical people. The document should include detailed drawings, elevations, cross-sections and plans to clearly demonstrate the codes. Design codes should develop the design vision for each estate and provide a clear set of codes informed by context to deliver this vision.

4.15 The next and final chapter gives general guidance on how it is envisaged the Plan will be delivered and implemented.
Part 05
Delivery and implementation
Delivery and implementation

5.1 Should regeneration of Merton’s three estates go ahead, this currently presents an opportunity to improve housing conditions for tenants, leaseholders, freeholders and contribute to addressing wider housing provision pressures in Merton and London. Delivery of the Local Plan will require addressing substantial challenges including managing financial viability, and the rehousing of the existing communities within the three neighbourhoods.

5.2 CHMP represents the major landowner and delivery lead. At this early stage it is difficult to identify with any certainty the exact number of new homes that is likely to come forward and how this will be delivered. Merton cannot deliver the Plan’s vision and objectives alone. The Council wishes the residents and all stakeholders to be actively involved throughout the process. It is essential that the Council continues to engage with local people and community groups within the three neighbourhoods to ensure the Plan and future development meets the needs of local people.

5.3 It is envisaged that the delivery programme will cover a period of 10 to 15 years and will occur over several phases. The Draft Estates Local Plan will be key to creating a robust and clear planning basis for development setting out the strategic framework to guide any redevelopment proposals.

5.4 Not unusually for a scheme of this size, financial viability is complex and modelling prepared by CHMP indicates a potential deficit. CHMP have committed to an open book accounting process to facilitate the understanding of the impact on residents and council services.

Keeping communities together – first phase of development for Eastfields Estate

5.5 Unlike High Path and Ravensbury, there is no available land (for example garage sites) within Eastfields Estate to allow new homes to be built for the first phase without demolishing existing homes.

5.6 Building new homes for existing residents to move into while their home is being built is very important for keeping existing communities together as far as is possible to create the foundations for a sustainable community long-term.

5.7 This therefore represents a challenge to demonstrating the Draft Estates Local Plan’s deliverability.

Options for first phase of development on Eastfields

5.8 To try and find a potential site suitable for the initial phase of new homes, officers reviewed several sites in the vicinity of Eastfields estate. In summary the criteria were:

- Close proximity – all sites under half a mile from Eastfields Estate.
- Minimal disruption – given the close proximity of the potential sites, relocation of existing estate occupants to these may help to minimise uncertainty and disruption and in turn help to keep the existing community together.
- Single ownership.
- Sites that could provide more than 50 new homes on one site.

5.9 An option to provide a site for new homes is land on the edge of the boundary of St Mark’s Academy.

5.10 It may be possible to build new homes along the boundary of land within St Marks Academy, between Eastfields Estate and Eastfields train station, preserving playing space while providing new homes that create better access between the station and the estate.
Option for first phase of development on Eastfields

Key
- Existing St. Mark’s Academy site boundary
- Existing Eastfields Estate site boundary
- Potential options for new homes at St. Mark’s Academy
Delivery and implementation

Risks of development around St Mark’s Academy

5.11 The approval would require the support of the school’s governing body and Academy trust, who hold the land on a 999 year lease from the council.

5.12 Development around St Mark’s Academy may result in a net loss of designated open space contrary to national and local Development Plan policies unless open space can be robustly demonstrated as surplus to requirements or a greater quantity and quality of school playing fields be reprovided elsewhere. Research would have to be undertaken to justify this. It is currently not known whether research would support this approach or not.

5.13 The area is designated as playing field under Section 77 of the Schools Standards and Framework Act 1998, and as such disposal requires approval of the Secretary of State for Education. The departmental guidance states that the Secretary of State is unlikely to approve applications that result in the school’s playing field provision falling under the area guidelines (as is in this case) but there are cases where a strong justification has resulted in approval.

Other alternative options

5.14 Other potential sites were considered and are not recommended to be taken forward.

- Eastfields Allotments: rejected as in use as allotments
- BMX track, adjacent to St Mark’s Academy and Lonesome primary school: rejected as new Sport England funded facility, recently opened in 2012. Would represent loss of sports facilities.
- Lonesome Primary school: rejected as lack of available space.
- Laburnum Estate car park: owned by Circle Housing Merton Priory, rejected as too small (only 445sqm) and in use as a car park for residents.

5.15 The council will use section 106 planning obligations and/or Community Infrastructure Levy (CIL) to ensure the delivery of key infrastructure and to mitigate the impact of development.

Section 106 planning obligations information can be found at:
http://www.merton.gov.uk/environment/planning/s106-agreements.htm

CIL information can be found at:

Glossary
A complete glossary of planning terms can be found at the Planning Portal website: http://www.planningportal.gov.uk. The glossary below should be used as a guide only and should not be considered the source of statutory definitions.

**Active design**
An approach to developing neighbourhoods that makes healthy lifestyles more accessible and inviting.

**Active frontage**
Buildings with a high number of entrances and windows that allow views between the inside and outside of buildings (Also building frontage and street frontage).

**Alluvium**
A layer of deposits from rivers formed over long periods of time.

**Ambiguous**
Unclear or having several possible meanings or answers.

**Amenity space (communal)**
Outdoor garden space shared with more than one dwelling, normally provided for groups of flats.

**Amenity space (private)**
Private balconies to individual flats or gardens to houses.

**Anglo Saxon**
Dating from the period in the UK before the Norman Conquest of 1066.

**Art Deco**
A style of art and architecture originating in the 1920s.

**Attenuation**
Reducing water flow to minimise flood risk, by reducing flow at its peak and thus extending the duration of increased flow; a reduction in intensity.

**Axis**
The point about which something turns.

**Balancing Pond**
A pond, always containing water (as opposed to a rain garden or swale) designed to reduce water flow by storing water during a storm and releasing it at a controlled rate later.

**Barriers**
Features that prevent easy movement around a place such as busy roads, rivers or railways with few crossing points.

**Basement parking**
Parking below ground level.

**Biodiversity**
This refers to the variety of plants and animals and other living things in a particular area or region. It encompasses habitat diversity, species diversity and genetic diversity. Biodiversity has value in its own right and has social and economic value for human society.

**Block**
An area of land normally defined by public streets and spaces and containing one or several buildings (also Development Block).

**Boulevard**
A broad avenue with space at the sides and/or middle for the planting of trees, flowers or grass.

**Buffer**
A strip of land or planting acting as a protective shield between two otherwise adjacent pieces of land, water or uses.

**Building elevations**
The outside walls of a building, usually meaning the front of the building facing the street.

**Building line**
A generally uniform, continuous line defining the limit beyond which buildings should not protrude into the streets.

**Built form**
The arrangement of buildings in a neighbourhood.
Build-out
A widening of a pavement into the carriageway in order to make crossing the road easier for pedestrians, manage vehicle speeds or define parking space or areas for landscaping or other street furniture.

Calico
Plain white cotton cloth.

Campus (style)
Similar in layout to the buildings of a college or university.

Carriageway
The part of a street generally used by vehicles, as opposed to the footway, generally used by pedestrians. In mews streets and home zones this distinction is deliberately less clear.

Cladding
The outside covering of a building, not part of its structure.

Classical
A style based on ancient Greek and Roman architecture.

Cohesive
Appearing well integrated or unified.

Combined Heat and Power (CHP)
An efficient combined production of electricity and usable heat utilising waste heat locally and providing heat and hot water for the local area.

Combined sewer
A pipe carrying foul sewerage and surface water run-off.

Comparison shops
Shops selling items such as clothing, household and recreational goods.

Component
A part of something larger.

Connectivity
How well an area is linked to its surroundings. This is as much about visual and pedestrian connectivity and can include restrictions for certain modes.

Context
The surroundings of something, how something relates to its environment and how that environment affects it.

Convenience shops
Shops selling everyday items such as food, drink, newspapers and confectionary.

Cul-de-sac
A short dead-end street. A street or passage closed at one end.

Culvert
An underground channel carrying a stream, river or drain.

Dead frontage
Buildings with no or few doors or windows facing the street.

Defensible space
The part of a street between the back of the footway and the front of the adjacent building, and how the change is made from the public space of the street to the private realm of the building. Environment where the physical characteristics, building layout and site plan, function to distinguish between public space and private space.

Defunct
No longer in operation.

Delineate
To show the alignment, boundary or shape of something.
## Glossary

### Density
The number of dwellings, habitable rooms, people or floors pace for any given area of land.

### Disparate
Things that are different enough that it is impossible or difficult to compare them.

### District heating network
A local or sub-regional production and supply of heat and electricity from a CHP(s) to local customers.

### Dual-aspect
A dwelling – usually referring to a flat – which has windows on two opposite sides of the building it sits within, allowing different views, quiet zones natural ventilation and increased natural light.

### Enclave
A smaller area sitting within a larger area that is different or distinct from the larger area.

### Era
A period in history.

### Exacerbate
To make a situation more excessive, extreme or intense.

### Exceedance
A level of flooding that exceeds that for which something has been designed.

### Figure-ground
A map that shows the relationship between built and un-built space, with buildings usually show in black.

### Filter drain/strip
A channel of stones, often to the side of a road that allows water to soak away into the ground whilst capturing pollutants. Can be used in conjunction with swales and rain gardens.

### Fluvial flood plain
The flood plain of a river. Areas adjacent to a watercourse, tidal lengths of the river or sea, where water flows in times of flood or would flow but for the presence of flood defences.

### Focal point
A visual focus created by a distinctive building, monument, landmark or space.

### Framework
High level guidance for the development and shaping of a large area or neighbourhood.

### Garden City
A new town designed with low density and large areas of greenspace and landscaping and a mix of different uses, designed to be self-sufficient.

### Gateways
Locations that signify the leaving of one distinct area and moving into another.

### Green chain
These are areas of linked but separate open spaces and the footpaths between them. They are accessible to the public and provide way-marked paths and other pedestrian and cycle routes.

### Green corridor
This refers to relatively continuous areas of open space leading through the built environment, which may be linked and may not be publicly accessible. They may allow animals and plants to be found further into the built-up area than would otherwise be the case and provide an extension to the habitats of the sites they join.

### Green roof
A roof covered in vegetation for the purposes of catching water run-off, increasing biodiversity, cleaning run-off, improving insulation and reducing the heat-island effect, as well as being visually pleasing.

### Green-field run-off
The rate of run-off that would occur from a site in its natural, undeveloped state.

### Grid-iron streets
A series of streets that connect with each other creating a grid-like pattern.
Habitable room(s)
The living accommodation in a dwelling, including living room, dining room, bedroom, kitchen with dining space.

Habitats
The natural home or environment of an animal, plant, or other organism.

Hard-standing
An area of solid ground normally used for the parking of vehicles.

High-rise
High density development made up of buildings that are of multiple storeys and generally have a small footprint in relation to the high number of storeys they contain.

Historic environment
All aspects of the environment resulting from the interaction between people and places through time, including all surviving physical remains of past human activity, whether visible, buried or submerged and landscape and planted or managed flora. Those elements of historic environment that hold significance are called heritage.

Home zone
A small, highly traffic-calmed, residential area, often with road and pavement integrated into a single surface, where pedestrians and cyclists have priority over cars.

Horticultural
Relating to the growing of plants, trees, fruit, vegetables etc.

Huguenot
A French Protestant denomination in the 16th-17th Century.

Iconic
Used to describe buildings that stand out amongst others because of their distinctive design or appearance and that may also set a new trend.

Idyllic
Used to describe a place or experience that is ideal - being very pleasant, beautiful or peaceful.

Incidental
Something that is a minor part of something else larger.

Inclusive design
Creates an environment where everyone can access and benefit from a full range of opportunities available. It aims to remove barriers that create undue effort, separation or special treatment and enables everyone to participate equally in mainstream activities independently with choice and dignity.

Incoherent
Something that is unclear and difficult to understand.

Incremental
Something that grows or increases in a step by step manner, rather than all at once.

Infrastructure
The basic systems and services such as streets, buildings, transport and energy supplies an area needs to function.

In-situ
In it’s original, or as-found location or position

Insular
Inward-looking

Integrated
Combining or joining together of two or more different things, such as land uses, transport modes, types of play space.
Glossary

**Interface**
The point at which two different things meet, such as a public street and a private building.

**Intergenerational centre**
A centre for residents of all ages, offering activities and services focussed on bridging gaps between generations on many issues e.g. health, learning, culture, community building, fear of crime and dispute resolution.

**Inter-war**
The period 1918-1939 between the First and Second World Wars.

**Landmark**
Easily identifiable, prominent objects in the environment which serve as reference points and aid in navigation and orientation through an area e.g. a building or statue.

**Landscape**
The collection of visible feature in a place such as the trees, land form, buildings and spaces, generally referring to natural features.

**Legibility**
The ease with which someone can understand and navigate through the layout of the streets and spaces of a neighbourhood.

**Linear**
Arranged, constructed, or laid out in a line.

**Linoleum**
A man-made water-resistant floor covering often used in kitchens and bathrooms (also known as Lino).

**Listed (building)**
A building that is protected by law for its architectural or historic value.

**Local Nature Reserve (LNR)**
An area protected by law that has features special interest for animal and plant life.

**Local Open Spaces**
A collective term for the following open space categories as listed in Table 7.2 in the London Plan 2015:
- Local Parks and Open Spaces
- Small Open Spaces
- Pocket Park
- Linear Open Spaces

**London Plan**
The London Plan is the spatial development strategy for London. Produced by the Mayor of London, it provides the overall spatial vision for the entire region, identifying the broad locations for growth, often by identification of sub-regions, and major infrastructure requirements, together with the housing numbers to be provided for in boroughs’ Local Plans. It is part of the development plan for Merton together with the borough’s Local Plan documents and should be used to guide planning decisions across London. All Local Plan documents have to be in general conformity with the London Plan.

**London Plan density matrix**
Table 3.2 in the London Plan sets out guidance on appropriate density for development, based on how good the public transport is and whether it is in an urban or suburban location.

**Low-rise**
High or medium density development made up of buildings generally of 2-4 storeys that have a large footprint in relation to the number of storeys they contain.

**Massing**
The general size and shape of a building.

**Mews**
A narrow back street originally containing stables and staff accommodation for larger houses on an adjacent main street. Now a term for a small, narrow residential street of small terraced dwellings.

**Mitigate**
To make the effects of something less acute or severe.
Mixed-use
A building containing more than one use, normally with one use on the ground floor and a different use on the upper floors.

Nascent
Beginning to exist, or the early stages of development.

Natural surveillance
The ability to overlook a street or space from within a building due to it having several entrances and windows, particularly at ground level.

Nodes
Areas of focus - rather than points. These can be a street of shops, a major road junction or a local centre.

On-street parking
Parking spaces marked on the street, typically in line with the flow of traffic and on the edge of the street.

Open space
All the land that is predominantly undeveloped, other than by buildings or structures that are ancillary to the open space use, and bodies of water that are indicated as open space on Merton's Policies Map. The definition covers a broad range of types of open space within Merton, whether in public or private ownership and whether public access is unrestricted, limited or restricted.

Organically developed
Gradually developed over time with little or no overall planning.

Orientation
Familiarising oneself with the layout of a place in order to easily find ones way around.

Orlit
A method of concrete pre-fabrication used to construct houses following the Second World War.

Palette
A defined set of choices according to a set of criteria, e.g. a palette of materials from which buildings can be constructed.

Paradox
Something that is strange or contradictory, but proves to be true.

Parameters
A boundary or limit within which something takes place.

Parking courts
Car parks serving blocks of flats or houses or small groups of houses.

Passive
Something that takes place without concerted will or effort, such as sitting in greenspace to enjoy the experience of the space itself, rather than a more active use such as playing a physical game in the space.

Perceptible
Able to be seen or noticed.

Perimeter
The boundary or edge of something, that returns to an original starting point and defines an area.

Perimeter blocks
A group of buildings forming an urban ‘block’ defined by streets. The buildings are usually arranged so that all the fronts face outwards towards the street and the private backs face in to the centre of the block.

Peripheral
Something that is located at the edge or boundary of a place or area.
**Glossary**

**Permeability**
How easy it is to move through an area by any mode of transport. A network of interconnected streets with little or no restrictions on access is a permeable layout, offering a choice of routes between places. Not to be confused with connectivity.

**Permeable paving**
A hard paved surface that allows water to drain between individual pavers.

**Perpetuate**
To undertake an action that makes something continue indefinitely where it would otherwise change or come to an end.

**Philosophies**
Ideas and theories about how things work, particularly relating to knowledge, reality and existence, but also about how cities work and how people behave in them.

**Pocket park**
A small, incidental area of greenspace and planting in an otherwise urban area, providing seating and rest opportunities for people.

**Podium**
An area raised above ground, often containing parking below and/or a garden area above.

**Prefabricated**
A building whose parts are made off-site (e.g. in a factory) then assembled at their final destination.

**Prevalent**
Something that is widespread or common in an area or at a particular time.

**Public realm**
This is the space between and surrounding buildings and open spaces that are accessible to the public and include streets, pedestrianised areas, squares, river frontages etc.

**Public Transport Accessibility Level (PTAL)**
A measure of accessibility by public transport, based on a range of factors including distance from public transport, number of modes, number of services, their frequency and opportunity for interchange. There are six accessibility levels with one being poor and six being excellent.

**Rain garden**
A planted depression or shallow hole that rainwater soaks into from surrounding hard surfaces. This helps keep water clean and reduces the load on drains and rivers, helping reduce flooding. Usually, it is a small garden which is designed to withstand the extremes of moisture and concentrations of nutrients that are found in stormwater runoff.

**Reveals**
The distance which windows are set back from the building frontage (or elevation).

**Riparian**
The land around and immediately adjacent to rivers and streams.

**Run-off**
The flow of water from roofs of buildings and hard surfaces before it reaches the drainage system or permeable surfaces that allow it to soak into the ground.

**Secondary heat source**
Heat wasted from places like factories or the tube network, that is incorporated into a District Heat Network.

**Separate sewer**
A pipe carrying foul sewerage or surface water run-off, but not both.

**Severance**
A separation of links between two areas that can be both physical or perceptual. Separation is usually caused by barriers such as railways, rivers or busy roads, making movement from one area to the other difficult, inconvenient or impossible without great detour.
**Single aspect**  
A building which has windows on one side only. Single aspect homes are difficult to naturally ventilate and more likely to overheat.

**Site of Importance for Nature Conservation (SINC)**  
Locally important sites or nature conservation adopted by local authorities for planning process and identified in the local development plan.

**Soakaway**  
A pipe or other means of conveying water to soak into the ground.

**Spalling**  
Rust or cracks below the surface of a material causing the material to expand. The surface cracks and parts of it break free and fall off.

**Strategic Environmental Assessment (SEA)**  
A process of environmental assessment of certain plans and programmes which are likely to have a significant effect on the environment. It is required by European Directive 2001/42/EC (Strategic Environmental Assessment Or SEA Directive).

**Strategic Road Network**  
These are the main roads in the borough providing for longer journeys rather than local traffic, and which link with the wider national road network. In Merton this consists of the Bushey Road-Kingston Road-Merton High Street route (A298-A238), the Croydon Road-Commonside West-Western Road route (A236) and London Road north of Mitcham (A217).

**Suburban (Suburbia)**  
Areas of a town or city that are away from the centre, often on its edge, have lower densities than inner, urban areas, have more spacious and informal layouts with larger gardens, more open space, more houses than flats and where different uses are more clearly separated than in urban areas.

**Supplementary Planning Document (SPD)**  
A policy guidance document giving additional guidance to that contained in statutory documents such as the Core Strategy, on specific policy areas.

**Sustainable development**  
A general approach to the efficient use of resources that does not prejudice future generations from meeting their own needs. There are three dimensions to sustainable development which are environmental, social and economic.

**Sustainable Urban Drainage System (SUDS)**  
Sustainable urban drainage systems cover the whole range of sustainable approaches to surface drainage management including source control measures.

**Swale**  
A shallow, broad and vegetated channels (e.g. ditch), designed to catch and contain water run-off and direct it back into local watercourses or to drain naturally back into the ground.

**Sylvan**  
Referring to wooded areas, suggesting a peaceful, pleasant feeling away from the noise of modern life.

**Thoroughfare**  
A route between places, often a main road

**Townscape**  
The collection of buildings and spaces in a neighbourhood that creates the ‘urban landscape’ of an area which in turn influences how people physically and visually experience a place when they move around it.

**Transition zone**  
An area of change from one character to another, such as from public to private, urban to suburban, residential to commercial etc.
Glossary

Tree canopy
The upper part, or ‘crown’ of a tree, uses to describe a large group of trees, both in terms of its visual appearance and ecological habitat.

Tributary
A stream that flows into a larger stream or river.

Typology
The collection of visible feature in a place such as the trees, land form, buildings and spaces, generally referring to natural features.

Under-croft parking
Parking provision underneath a building. Parking may be on ground level, or a semi-basement, with the building above.

Urban
Areas of a town or city that are generally closer to the centre and have higher densities, more flats than houses, more closely mixed uses, more formal layouts and less open space.

Urban fabric (urban form)
The general arrangement of the buildings, spaces and infrastructure that shapes the urban environment of towns, cities and villages.

Utilisation
The use of something.

Vegetation
A general term for any planting of flowers, shrubs, grass, trees, hedges etc.

Vernacular
A style of architecture that is domestic, functional or local to an area, rather than one that is public, monumental or derived from classical architecture.

Views and vistas
Long, clear lines of sight ending in a specific point or focus, or wide general views of whole landscapes or townscales.

Watercourse
A term to describe all rivers, streams, ditches, drains etc. through which water flows.

Wetland
An area of regularly flooded land which is shallow enough to enable the growth of plants within the water.
